1 Introduction

The Santa Susana Field Laboratory (SSFL) occupies approximately 2,850 acres and is located at the top of Woolsey Canyon Road in the Simi Hills, Ventura County, California. The SSFL has the potential to discharge stormwater runoff impacted by constituents from the facility. As such, discharges from SSFL are currently regulated by the Los Angeles Regional Water Quality Control Board (LARWQCB) under *National Pollutant Discharge Elimination System (NPDES) Permit No. CA0001309 for the Boeing Company, SSFL, Canoga Park, CA, Order No. R4-2015-0033* (“2015 Permit”) (LARWQCB, 2015). The 2015 Permit¹ became effective on April 1, 2015 and states the following:

“The Discharger has agreed to maintain the Surface Water Expert Panel. With input from the Surface Water Expert Panel, the Discharger shall submit annual reports that describe the previous year’s monitoring results, evaluation of existing BMP performance, and submit a workplan that includes recommendations for modified and/or new storm water controls and monitoring that will address exceedances from any outfall addressed by this permit. The Discharger shall also support the Surface Water Expert Panel in organizing periodic public interaction events and encouraging public communication involvement. The first annual report shall be due within 6 months of the effective date of this permit [October 1, 2015].”

The *Site-Wide Stormwater Work Plan and 2014/15 Annual Report* (“2015 Work Plan”) (Santa Susana Surface Water Expert Panel and Geosyntec Consultants, 2015a) was intended to meet this requirement. This 2019/20 Annual Report is intended to meet the commitments outlined in the 2015 Work Plan. The existing work plan and permit will govern until a new permit is issued. This report focuses on the results and findings of the 2019/20 reporting year which covers the June 1, 2019 to May 31, 2020 period.

1.1 Background

The SSFL is jointly owned by the Boeing Company (Boeing) and the federal government. The National Aeronautics and Space Administration (NASA) administers the portion of the property owned by the federal government. As shown in Figure 1, the site is divided into four administrative areas (Areas I, II, III, and IV) with undeveloped land areas to both the north and south. Administrative Areas I and III are operated by Boeing, which owns the majority of Area I and all of Area III. A portion of Area I (40 acres) and all of Area II are owned by the federal government and are administered by NASA. Boeing and predecessor contractors performed work at the Department of Energy (DOE) ETEC (Energy Technology Engineering Center) site in Area IV at Santa Susana Field Laboratory prior to the 1998 Department of Energy remediation contract with Boeing. While the land in Area IV is owned by Boeing, the Department of Energy is responsible for the cleanup. Boeing no longer serves as the Department of Energy’s contractor. DOE owns specific facilities located on approximately 90 acres of Area IV. Industrial operations at the SSFL have ceased; current activities at the site include environmental monitoring and sampling, demolition, and remediation planning. The site also provides exceptional wildlife habitat and undeveloped land (open space).

¹ Prior to April 1, 2015 this site was regulated since 2010 under the *National Pollutant Discharge Elimination System (NPDES) Permit No. CA0001309 for the Boeing Company, SSFL, Canoga Park, CA, Order No. R4-2010-0090* (“2010 Permit”)

Stormwater discharges² from the SSFL are typically captured and treated upstream of or at the outfalls, up to a design storm size. An exception to this outfall-based treatment approach is at Outfalls 001 and 002 in the southern undeveloped land, where stormwater runoff consists of runoff from undeveloped areas with no or minimal history of industrial activity or known surface soil contamination, as well as treated stormwater from Outfalls 011 and 018, respectively. Runoff to Outfalls 001 and 002, downstream of Outfalls 011 and 018, is discharged without additional treatment. Another exception to this is at Outfalls 008 and 009, where the stormwater quality management strategy instead combines distributed source controls with natural treatment systems due to the challenge of treating stormwater at these canyon outfalls (i.e., outfall-based treatment would require construction of large dams with substantial environmental impact and potential risk to the public downstream). At Outfalls 008 and 009, Interim Source Removal Action (ISRA) and Best Management Practices (BMP) programs were implemented beginning in 2010 with oversight and participation of the LARWQCB to improve compliance with the 2010 Permit limits through the dual approach of remediation of surface soils that are above defined thresholds for NPDES constituents of concern, and through distributed control and/or treatment of stormwater runoff from prioritized subareas, respectively. The BMP Plan for the Outfall 008 and 009 Watersheds (MWH et al., 2010) (“2010 BMP Plan”) was developed under the oversight of the Surface Water Expert Panel (referred to herein as the “SWEP” or “Expert Panel”). The 2015 Work Plan replaced the 2010 BMP Plan, provides an overall strategy for improving NPDES compliance for stormwater discharges site-wide, and continues the important process of public outreach and engagement on stormwater issues.

The Surface Water Expert Panel -- consisting of Dr. Robert Pitt (University of Alabama), Dr. Robert Gearheart (Humboldt State University), Dr. Michael Stenstrom (University of California Los Angeles), Dr. Michael Josselyn (WRA Environmental Consultants), and Jonathan Jones (Wright Water Engineers) -- continues to oversee stormwater planning and design work at the SSFL, as well as provide input on monitoring, source removal activities and other NPDES Permit issues. The Surface Water Expert Panel also oversees scientific studies related to SSFL stormwater quality issues and BMP design, reviewed the stormwater Human Health Risk Assessment (HHRA), and interfaces with the public on SSFL stormwater activities and related considerations. Their original mission, to improve stormwater at NPDES Outfalls 008 and 009, was expanded through the 2015 Work Plan to include all NPDES outfalls as required through the 2015 Permit. This year, as in recent previous years, the Surface Water Expert Panel also reviewed the Quarterly Discharge Monitoring Reports (DMRs), SSFL SWPPP, BMP Plan, and Spill Contingency Plan, providing comments on these plans to offer the Panel’s perspective.

1.2 Site Overview

The outfalls regulated under the 2015 NPDES Permit are listed in Table 1 and depicted in Figure 1. The NPDES Permit states that 60% of the annual stormwater discharge from SSFL exits the property via two southerly discharge points (Outfalls 001 and 002) to Bell Creek, a tributary to the Los Angeles River. Upstream outfalls that contribute to the discharge at Outfalls 001 and 002 include Outfalls 011 and 018. Outfall 019 is permitted for the injection of treated groundwater, but not planned for the discharge of surface water. Outfall 020, while included in the NPDES Permit, is also not planned for the discharge of surface water. The Surface Water Expert Panel’s scope does not include groundwater, unless

² Treated groundwater discharges are also covered in the 2015 Permit, however, the 2015 Work Plan scope is limited to stormwater discharges.

groundwater is known to comingle with stormwater and potentially contribute constituents of concern to the NPDES outfalls. A separate Groundwater Expert Panel is active at SSFL and oversees Boeing related groundwater tasks, including addressing treated groundwater discharge and naturally occurring seeps and springs.

Stormwater from the northern areas of the site is transferred to Silvernale Pond for treatment prior to discharge at Outfall 018. Higher flows, beyond the storage/transfer system capacity, discharge at Outfalls 003 through 007 and 010. At Outfalls 011 and 018, stormwater conveyance and treatment systems (SWTSs) have been in place since 2012 for advanced treatment using ActiFlo coagulation and filtration systems which is pretreated. Flow variations are also minimized using storage ponds. However, the SWTS at Outfall 011 has had periods where operations lapsed during its lifetime. Because of the location, size and terrain of the Outfall 008 and 009 watersheds, coupled with the inability to practically store large amounts of stormwater in these watersheds, flows from these areas are not captured and treated by the SWTSs³, and instead a distributed stormwater treatment and iterative (or adaptive management-based) approach is employed in both the Outfall 008 and 009 watersheds, as described in the 2010 BMP Plan. Thus, Outfall 009 naturally flows to Arroyo Simi and stormwater runoff from Happy Valley (Outfall 008) naturally flows via Dayton Canyon Creek to Chatsworth Creek. Chatsworth Creek flows south to Bell Creek southwest of the intersection of Shoup Avenue and Sherman Way. Bell Creek subsequently flows southeast to the Los Angeles River.

Table 1. NPDES Outfall Descriptions

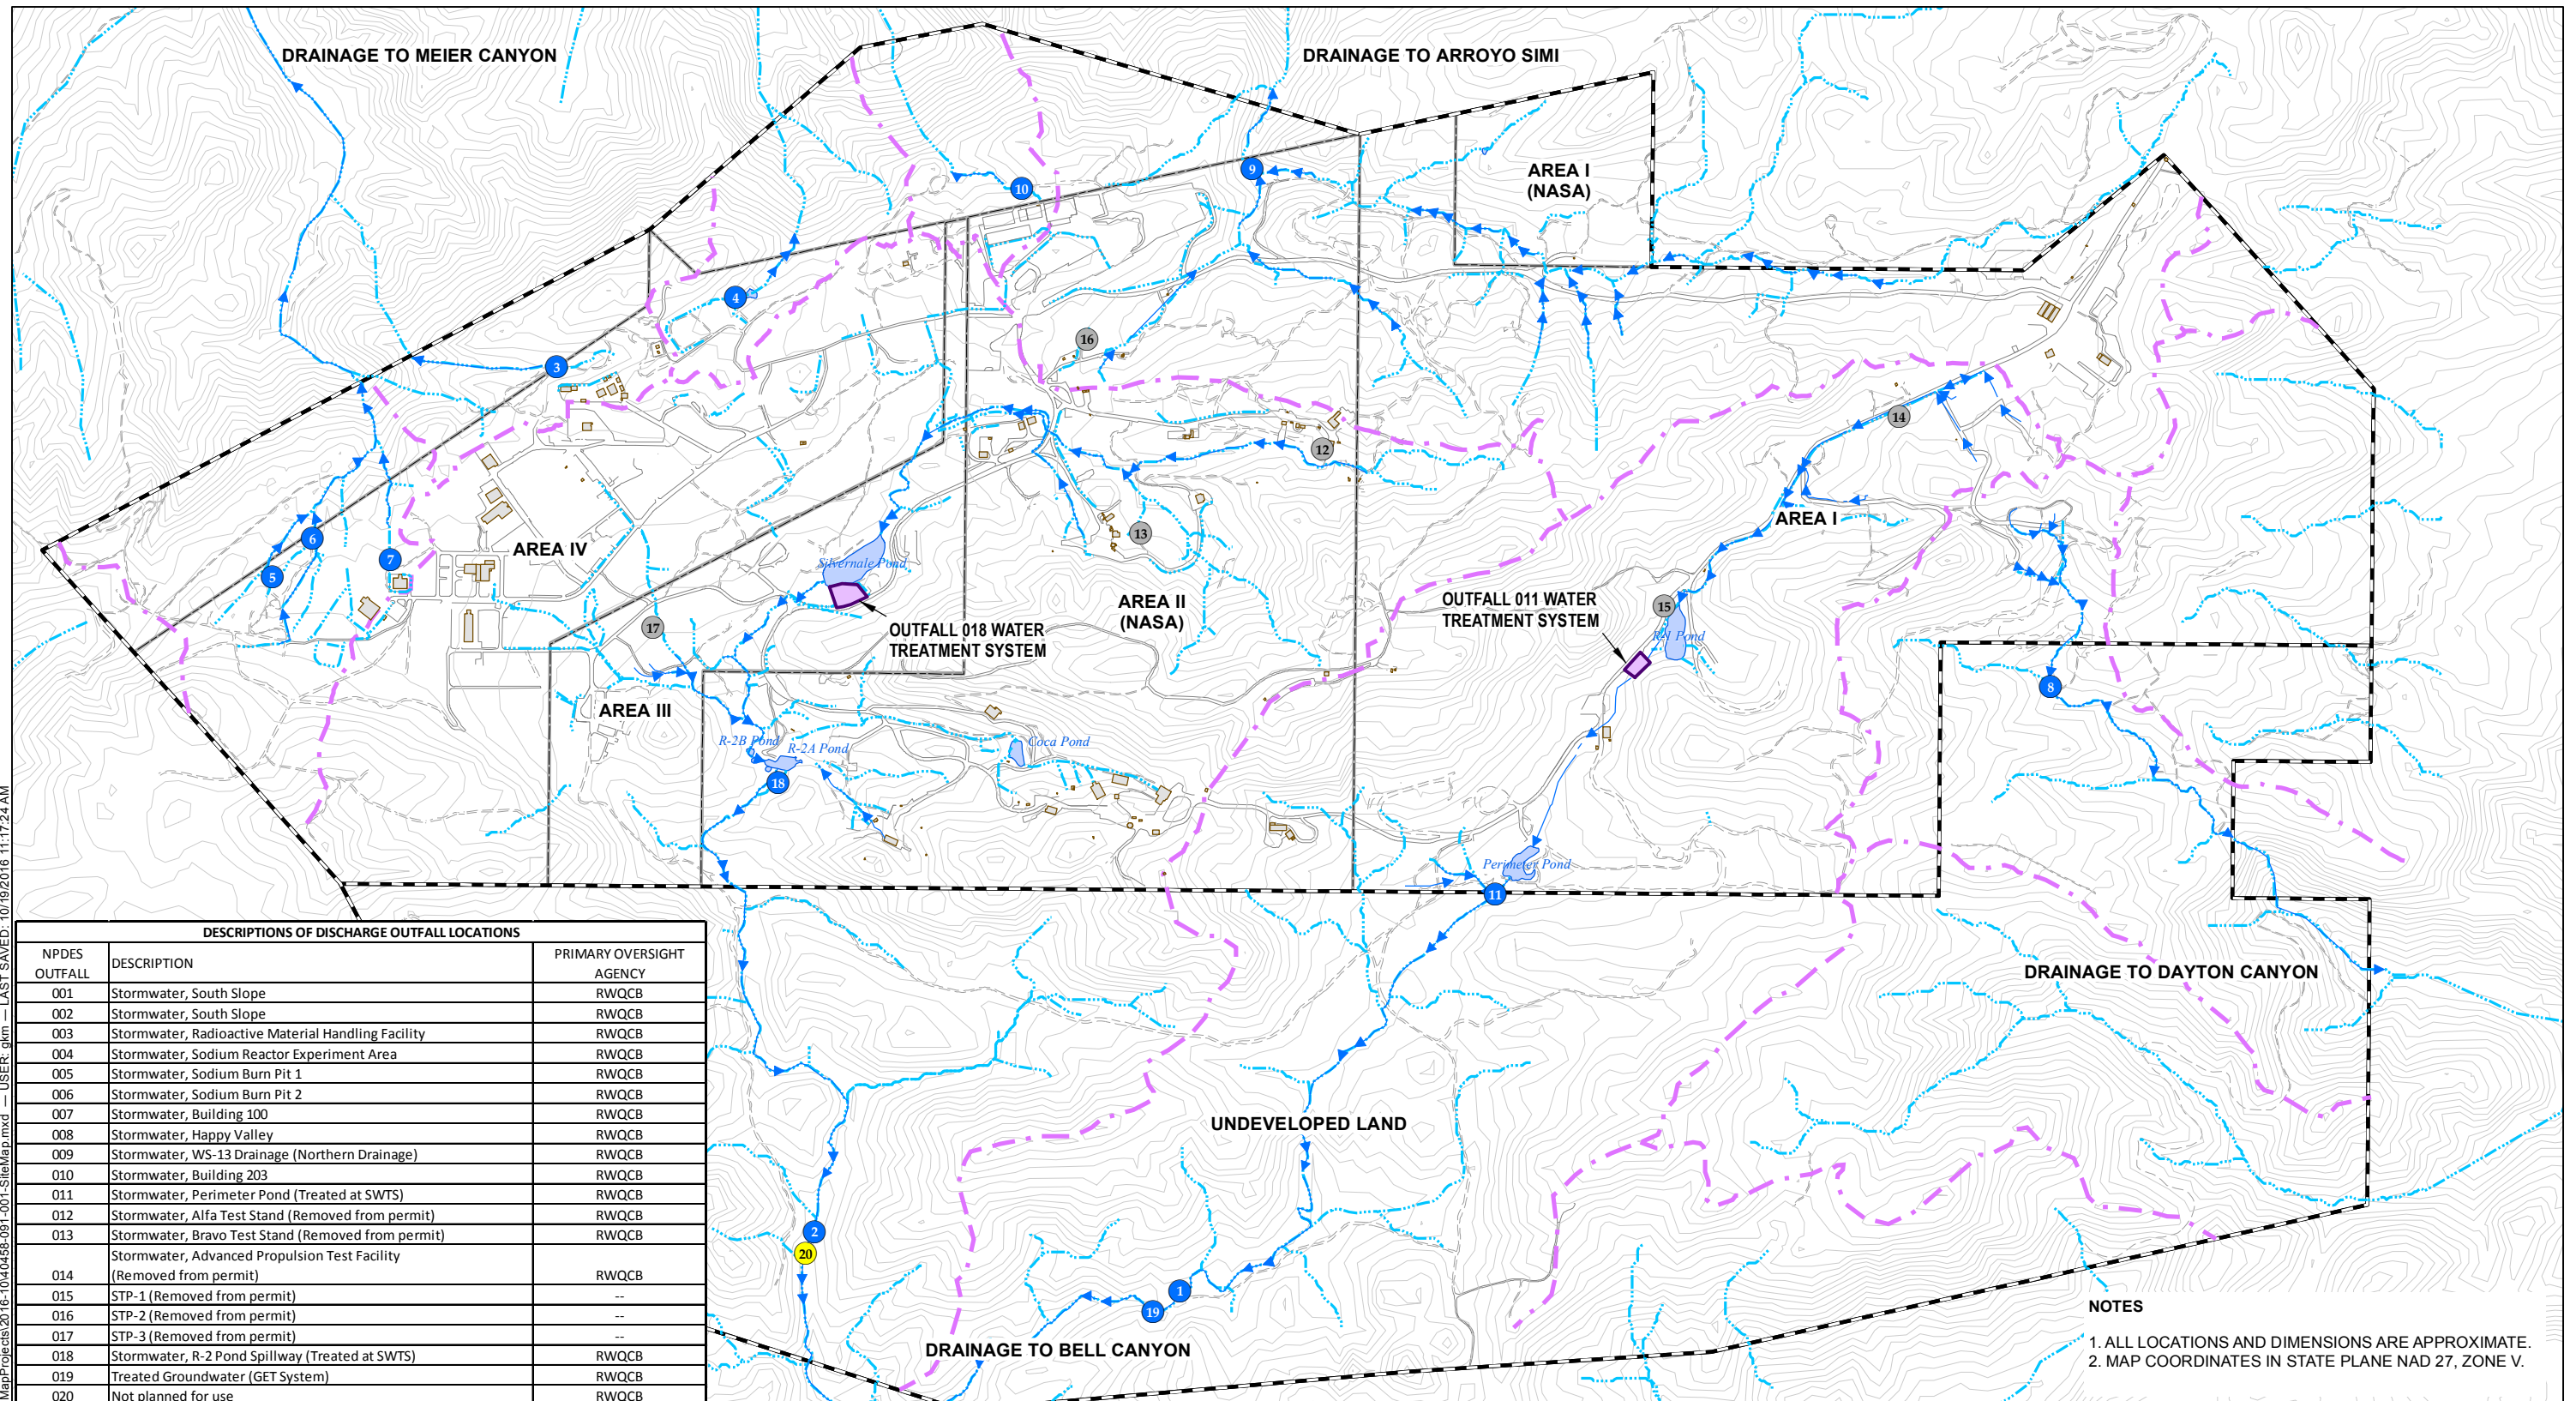

Outfall*	Status/Discharge Description
001	Downstream of Outfall 011; discharge to Bell Creek
002	Downstream of Outfall 018; discharge to Bell Creek
003	Runoff transferred to Silvernale for treatment prior to discharge at Outfall 018 ⁴
004	Runoff transferred to Silvernale for treatment prior to discharge at Outfall 018 ⁴
005	Runoff transferred to Silvernale for treatment prior to discharge at Outfall 018 ⁴
006	Runoff transferred to Silvernale for treatment prior to discharge at Outfall 018 ⁴
007	Runoff transferred to Silvernale for treatment prior to discharge at Outfall 018 ⁴
008	Stormwater from Happy Valley; discharge to Dayton Creek
009	Stormwater from Northern Drainage; discharge to Arroyo Simi
010	Runoff transferred to Silvernale for treatment prior to discharge at Outfall 018 ⁴
011	Stormwater and perimeter pond (treated at Stormwater Treatment System [SWTS]); discharge to Outfall 001
018	Stormwater and R-2 pond (treated at SWTS); discharge to Outfall 002
019	Injection of treated groundwater (GET System); no surface discharge
020	Not planned for use; Injection of treated groundwater (GET System); no surface discharge

*Outfalls 012 through 017 were excluded from the 2015 Permit

³ An exception to this is at the helipad, located in Area II in the Outfall 009 watershed, where some runoff is captured and piped to Silvernale Pond for treatment in the Outfall 018 SWTS.

⁴ If storage and transfer capacities to Silvernale are exceeded, stormwater runoff is treated in media filters at each individual outfall before discharging to Calleguas Creek tributaries.

1.3 Existing Stormwater Treatment

BMPs have been implemented throughout the site to treat stormwater prior to discharge. The major structural treatment BMPs (i.e., excluding site-wide erosion and sediment controls, unpaved road control measures, and demolition of buildings and paved areas with subsequent soil scarification and revegetation) are summarized in the *ISRA Performance Monitoring and BMP Monitoring for the Outfalls 008 and 009 Watersheds, 2014/2015 Rainy Season* (“2015 Annual Report for Outfalls 008 and 009”) (MWH *et al.*, 2015b), the 2015 BMP Plan (Haley & Aldrich, 2015), and subsequent Annual Reports, and include the following (see Figure 3 for photos of each), by completion date:

- 2009: Outfall 009 Culvert Modifications (CMs)
- 2010: Outfall 008 ISRA Excavations
- 2011: Outfall 009 Helipad Berms and Pumps
- 2011: Outfall 011 Stormwater Conveyance and Treatment System (SWTS)
- 2011: Outfall 018 Stormwater Conveyance and Treatment System (SWTS)
- 2012: Outfall 009 B-1 Sedimentation Basin and Media Filter
- 2012: Outfall 009 Northern Drainage Restoration Measures
- 2012: Outfall 009 CM-9 Additional Improvements
- 2013: Outfall 009 Lower Parking Lot Sedimentation Basin and Biofilter
- 2013: Outfall 009 ISRA Excavations
- 2013: Outfall 009 ELV Treatment BMP⁵
- 2013: Outfall 009 LOX Sandbag Berms and Slope Drains
- 2015: Outfall 009 B1436 Detention Bioswales
- 2017: Outfall 009 Wattles added around Poles along Roads
- 2017: Outfall 009 Upper Parking Lot Media Filter
- 2017: Outfall 009 Roadway Diversion to CM-3
- 2017: Outfall 009 Administration Area Inlet Filters
- 2017: Outfall 009 Enhanced Erosion Controls in the Former Shooting Range Area
- 2017: Outfall 009 Roadway Diversion to CM-1
- 2018: Outfall 009 CM-1 Reconstruction
- 2019: Outfall 009 Mulch Sack Curb Extension in Lower Parking Lot
- 2019: Area II Utility Pole vegetation clearing and soil base stabilization
- 2020: Outfall 009 ELV and Biofilter Cistern Generators Added
- 2020: Outfall 009 CM-3 Check Dams Added and Media Filter Reconstruction
- 2020: Southern Buffer Zone Utility Pole BMPs

In addition, there has been extensive use of erosion and sediment control BMPs, revegetation, stabilization of repaved road, and other activities to stabilize soil. Impervious surfaces, such as buildings and parking lots, have also been removed across the site and “disconnected” from one another, restoring those sites to more natural conditions.

⁵ ELV Treatment BMP was not operational in the 2018/19 reporting year due to the Woolsey Fire burning the power supply connection. A generator was purchased and was installed in September 2019, so it was operational for the 2019/20 reporting year.

Stormwater from Outfall 011 is pumped to a storage pond for settling and evaporation and, when runoff volumes are anticipated to exceed the pond storage capacity, stored stormwater is treated using an advanced treatment system. The treated stormwater then flows to Outfall 001. However, in November of 2018 the conveyance pipelines burned in the Woolsey wildfire and the OF011 SWTS was not operational in the following 2018/19 season, and flows from Outfall 011 were instead treated only by the flow-through media filter at the outfall. The OF011 SWTS was repaired in late 2019 and was operational prior to the first storm event of this recent 2019/2020 season. All stormwater (up to a certain size design storm event that varies by outfall based on site-specific pumping and storage capacities) from Outfalls 003, 004, 005, 006, 007, 009⁶, and 010 is pumped to the Outfall 018 SWTS and treated along with flows from the Outfall 018 watershed. The SWTS has been highly effective at reducing exceedances.

The various distributed BMPs in the Outfall 009 watershed (e.g., widespread revegetation, erosion and sediment controls, natural treatment BMPs) have also been effective at reducing the concentrations of the constituents of concern (COCs) in the watershed's stormwater. In general, the statistical evaluation of influent versus effluent BMP performance sample results included in this Annual Report indicated that significant COC removals are occurring in these subareas, particularly for BMP influent samples that are above Permit Limits.

Limited runoff has occurred at Outfall 008 since the completion of ISRA activities (the identification, evaluation, remediation or stabilization, and restoration of areas of contaminated soil containing COCs that may have contributed to exceedances of NPDES Permit limits in stormwater) and installation of new erosion and sediment controls, revegetation, and unpaved road stabilization in 2012. During the 2013-2018 period, four discharges occurred, each sampled and analyzed for approximately 60-200 parameters, and only three results were at concentrations above the 2015 Permit Limits. This outcome reflects positive performance of the ISRA soil removal activities, revegetation/restoration, and erosion controls targeting sediment-bound COCs. While the 2018/19 year had nine samples collected and 11 results at concentrations above the 2015 Permit Limits, this increase in runoff and exceedances is likely due to a combination of the above average rainfall and post-Woolsey wildfire conditions that decreased vegetative cover and accelerated runoff. In the 2019/20 year, there were only five samples collected and none had concentrations above the 2015 Permit Limits. These results further demonstrate the success of the iterative and distributed BMP approach that has been employed in these watersheds.

⁶ Stormwater runoff from a small area within the Outfall 009 watershed (helipad area) is pumped to the storage pond for treatment prior to being discharged from Outfall 018, while stormwater runoff from the remaining, vast majority of the watershed flows to Outfall 009.

1.4 Permit History

An overview of past SSFL stormwater permits, Expert Panel involvement, and Permit limit and benchmark exceedances (as compared to the 2015 Permit effluent limits/benchmarks) at the regulated outfalls over the past 20 years is provided in Figure 4. The number of Permit limit and benchmark exceedances that occur each year are a function of permit changes, annual rainfall, treatment BMPs and stormwater discharge avoidance strategies implemented, and natural variability of stormwater quality. Notable milestones shown on Figure 4 include:

- **1998 NPDES Permit:** NPDES Permit No. CA0001309 issued to regulate wastewater and stormwater discharged from SSFL.
- **2004 NPDES Permit:** The 2004 Permit included new CTR-based effluent limits and added 11 new compliance monitoring locations. As a result for the increased regulation, the number of benchmark and Permit limit exceedances increased.

- **2005 Topanga wildfire:** Approximately 97% of SSFL was burned resulting in an increased number of benchmark and Permit limit exceedances compared to reporting years with similar rainfall.
- **2006 NPDES Permit:** The 2004 Permit was revised to also include the waste load allocations (WLAs) from the applicable TMDLs for the downstream waterbodies.
- **2007 Cease and Desist Order (CDO):** Through the CDO, the RWQCB required “the assembly of a panel to review site conditions, modeled flow, contaminants of concern, and evaluate the BMPs capable of providing treatment to meet the final effluent limits.” The CDO also required BMP planning, performance evaluation, and reporting requirements.
- **2010 NPDES Permit:** No major changes to Permit. The Expert Panel continued to make data-informed BMP recommendations in the Outfall 008 and 009 watersheds, which were implemented at SSFL (see Section 1.3).
- In 2011, following the construction of the Outfall 018 SWTS, stormwater from Outfalls 003 through 007 and 010 was retained in storage tanks and transferred to the SWTS, reducing the number of discharges and opportunities for exceedances statewide.
- **2015 NPDES Permit:** Permit expanded the Expert Panel’s charge to all regulated SSFL outfalls. In response, the Panel reviews Permit limit and benchmark exceedances for all outfalls and makes data-driven BMP recommendations on a site-wide basis. In the 2015-2018 drought period, the number of Permit limit and benchmark exceedances fell compared to years with similar rainfall.
- **2018 Woolsey wildfire:** Approximately 80% of SSFL was burned and above-average rainfall was measured. Because of the hydrophobicity⁷ of the soil and the loss of vegetative cover due to the wildfire event, rain events after the fire produced significantly greater amounts of runoff compared to similar sized rains during non-fire years. There were an increased number of benchmark and Permit limit exceedances compared to reporting years with similar rainfall.

1.5 Report Organization

This report is organized as follows:

- Section 2: Monitoring Activities
- Section 3: BMP Activities
- Section 4: Key Findings
- Section 5: Recommendations
- Section 6: Milestones/Schedule
- Section 7: References

⁷ Soils that exhibit hydrophobicity cause water to collect on the soil surface rather than infiltrate into the ground. Wildfires generally cause soils to be hydrophobic temporarily, which increases water repellency, surface runoff and erosion in post-burn sites.

Figure 3. Summary of SSFL Permits, Surface Water Expert Panel Involvement, and Water Quality, 1998-2020

2 Monitoring Activities

This section describes the hydrologic characteristics of the past reporting year, as well as a summary of the results of stormwater samples collected at NPDES compliance outfalls (in accordance with the 2015 NPDES Permit), BMP monitoring in the Outfall 009 watershed (in accordance with the 2018/19 Sampling and Analysis Plan [Stantec, 2018]), as well as a summary of monitoring activities conducted as part of the Northern Drainage assessment and the non-industrial sources special study (Santa Susana Surface Water Expert Panel and Geosyntec Consultants, 2015b).

2.1 2019/20 Rainfall

The long-term average annual rainfall at SSFL from 1959 to 2020 is 17.02 inches⁸, primarily occurring as winter storms from October through March. Alternating periods of above average and below average annual rainfall amounts are common. Little rainfall typically occurs during the April through September dry season. 20.54 inches of rainfall were measured in the 2019/20 reporting year (the reporting year is defined as June 1 – May 31). This past season’s rainfall was higher than average and is equivalent to the 69th percentile rain year for the 1959-2020 period of record. Nine rain events (where a “rain event” is defined in the Permit as greater than 0.1 inches of rainfall in a 24-hour period and preceded by at least 72 hours of dry weather) occurred in the 2019/20 reporting year, with five of these storms producing observable flow at one or more Outfalls. For historical context, Table 2 summarizes the rainfall over the past eleven reporting years, since submittal of the Surface Water Expert Panel Work Plan in 2010. Five of these eleven years have had above average rainfall.

Table 2. Historical Rainfall at SSFL, since 2010 Surface Water Expert Panel Work Plan

Reporting Year	Annual Rainfall	Percent of Average Annual Rainfall	Number of Rain Events
2019/20	20.5	121%	9
2018/19	26.3	155%	12
2017/18	9.8	58%	4
2016/17	23.4	138%	14
2015/16	12.0	71%	13
2014/15	11.2	66%	9
2013/14	6.1	36%	5
2012/13	8.1	48%	9
2011/12	11.3	67%	10
2010/11	23.4	138%	14
2009/10	19.4	114%	11

Above average annual rainfall amounts are **bolded**.

Table 3 summarizes the 2019/20 individual rainfall event characteristics, as well as the NPDES outfalls sampled, and the number of watershed 009 BMP subarea monitoring samples. A total of 47 watershed

⁸ Data from the Simi Hills – Rocketdyne Lab gauge (Ventura County Watershed Protection District site 249) was used to determine annual rainfall from 1958/59 through 2000/01. However, rainfall data are not available at this gauge from 1977/78 through 1984/85. Data from the Area 4 gauge (which was moved to Area 1 on January 1, 2013) were used to determine annual rainfall from 2001/02 through 2019/20. This results in a period of record of 54 years.

BMP samples (including BMP performance, potential BMP subarea⁹, and background) were collected in the 2019/20 reporting year. Figure 5 illustrates the cumulative rainfall and NPDES outfall discharge samples collected during the 2019/20 reporting year.

Figure 4. Annual Cumulative Rainfall and Outfall Discharge Samples Collected, 2019/20

The greatest rainfall event occurred on March 10-23, 2020 (7.08-in), which had both 6-hour and 24-hour maximum rainfall intensity recurrence intervals of 1-year (Figure 6). The next largest events occurred on December 22-26, 2019 (3.88-in) with a 6-hour maximum rainfall intensity recurrence interval of nearly 2-years and April 5-13, 2020 (3.81-in) with 6-hr rainfall intensity recurrence interval of less than 1-year (Table 3 and Table 4).

Table 3. NOAA Point Precipitation Frequency Estimates for Event Intensity at SSFL

Average Recurrence Interval (years)	1	2	5	10	25	50
1- hr Precipitation Depth (in)	0.51	0.67	0.87	1.03	1.24	1.41
3- hr Precipitation Depth (in)	0.95	1.24	1.62	1.92	2.32	2.62
6- hr Precipitation Depth (in)	1.38	1.80	2.35	2.78	3.36	3.79
12- hr Precipitation Depth (in)	1.89	2.47	3.21	3.81	4.59	5.18
24- hr Precipitation Depth (in)	2.53	3.33	4.34	5.14	6.20	6.99

⁹ “Potential BMP subarea monitoring locations” are defined here as drainage areas for stormwater runoff sampling points, and that include ISRA, RCRA Facility Investigation (RFI), and/or developed areas (i.e., buildings, parking lots, roads, etc.) so that impacted runoff quality might be expected and/or treatment BMPs might be necessary, pending an evaluation of the monitoring results.

Table 4. 2019/20 Reporting Year and Monitoring Event Summary

Rain Event	Total Rainfall ¹	Event Duration ¹	24-hr Recurrence Interval	Average Rainfall Intensity ¹	Maximum 1-Hour Rainfall Intensity ¹	NPDES Outfalls with Sampleable Discharge	Number of Outfall 009 Watershed BMP Subarea Monitoring Samples
	(in)	(hrs)	(years)	(in/hr)	(in/hr)		
11/20/2019	0.37	2	<1	0.185	0.33	None	5

4/5-13/2020	3.81	187	<1	0.021	0.29	001, 008, 009, 018, (008 and 009 also had 7 day follow up samples)	4
(018 SWTS treated discharge, co-mingled with rain) 4/9 – 4/15/2020						002, 018 (002 also had 7 day follow up samples)	
5/18/2020	0.22	7	<1	0.031	0.07	None	None
Non-Rain Event Total ²	0.26	--	--	--	--	--	--
Total	20.54	--	--	--	--	26 samples	47 samples

¹ Total rainfall, average rainfall intensity, and maximum 1-hour rainfall intensity were calculated based on rainfall recorded at a maintained and calibrated weather station within Area I.

² On the following six days, rainfall was measured but was not considered a rain event per the NPDES Permit definition: June 1, 2019 (0.01"), June 21, 2019 (0.01"), September 28, 2019 (0.07"), December 14, 2019 (0.01"), February 9, 2020 (0.09"), and April 2, 2020 (0.07").

Figure 5. Observed Precipitation Intensities and Durations for 2019/20 Reporting Year, Area I Gauge, with NOAA Point Precipitation Frequency Estimates

Most site structural BMPs are designed to treat the 24-hr 1-year recurrence interval storm (2.5-in). Additionally, the rip rap placed in the Northern Drainage as grade control structures was sized to prevent movement during storms up to the 5-year event. However, when back to back storms occur, even a storm smaller than the design storm can overwhelm the BMPs. This past season, the highest recorded 24-hour rainfall (2.65-in on 3/12/2020) was just above the 1-year recurrence interval (2.53-in) and no significant back to back events occurred; both of which may have contributed to why no BMP overflow events were observed this year.

2.2 2019/20 Stormwater Sampling

During the 2019/20 rainy season, 26 NPDES outfall samples, 47 BMP performance samples in the Outfall 009 watershed, and 7 subarea samples in the Outfall 001 and 002 watersheds were collected. These results are discussed in the sections below.

2.2.1 NPDES Outfalls

SSFL outfall discharges are monitored for water quality compliance with the 2015 NPDES Permit. This past reporting year, 26 total discharge samples were reported for Outfalls 001, 002, 008, 009, and 018

combined, as shown in Table 5. Of the 26 discharge samples and across the suite of NPDES parameters sampled, twelve benchmark exceedances and no permit limit exceedances were measured. These benchmark exceedances are discussed following Table 5. No sampleable discharge (and thus no opportunities for Permit limit or benchmark exceedances) occurred at Outfalls 003, 004, 005, 006, 007, 010, 011, 019, or 020.

Table 5. NPDES Outfalls – Reported 2019/20 Stormwater Discharges and Benchmark Exceedances

Outfall	Dates of Discharge-Producing Storm Events and SWTS Operations ^{a,b}	Number of Reported Exceedances (Year Total) ^c	Reported Exceedances

^a Silvernale Stormwater Treatment System treated discharge

^b Silvernale Stormwater Treatment System treated discharge comingled with rainfall

^c The number of reported exceedances (year total) is based on the sum of the exceedances reported in the quarterly reports

^d Most parameters are analyzed from a 24-hr composite sample

^e Quarterly Monitoring Report reported one exceedance for gross alpha (14.1 +/- 3.6 pCi/L), but noted this result was indeterminate compared to the daily max benchmark (15 pCi/L) and that OF001 annual average (3.65 +/- 0.64 pCi/L) was below, therefore concluding gross alpha at OF001 was in compliance for the reporting year.

An investigation into the suspected causes of each exceedance is discussed in Appendix C. Potential sources evaluated included impacted surface soils (soils in or near former operations), pavement solids, treated wood, atmospheric deposition, and background soils. A summary of the exceeding constituents at each outfall are shown in Table 6 below. Outfall 001, 002, and 008 are similar in that they are largely undeveloped with only minimal access roads. The main difference between Outfall 008 and the Southern Buffer Zone watersheds (001 and 002) is that Outfall 008 has had more erosion control and stabilization measures implemented. This is reflected in the average TSS concentrations in each watershed: 85 mg/L at Outfall 001, 21 mg/L at Outfall 002, 4.4 mg/L in Outfall 008, and 3.8 mg/L in Outfall 009, and 0.85 mg/L at Outfall 018. The Surface Water Expert Panel developed recommendations based on their review of these results. This year's recommendations are discussed in Section 5.2 of this report.

Table 6. Summary of Exceeding Constituents by Outfall

Parameter	Outfall 001	Outfall 002	Outfall 008	Outfall 009	Outfall 018	Total
Gross Alpha	1 ^a	0	0	0	0	1
Iron	3	3	NR	NR	0	6
Lead	1	0	0	0	0	1
Manganese	1	0	NR	NR	0	1
TCDD TEQ (no DNQ)	2	1	0	0	0	3
Total	8	4	0	0	0	12

NR = this parameter does not have a regulated permit effluent limit at a particular outfall

^a Quarterly Monitoring Report reported one exceedance for gross alpha (14.1 +/- 3.6 pCi/L), but noted this result was indeterminate compared to the daily max benchmark (15 pCi/L) and that OF001 annual average (3.65 +/- 0.64 pCi/L) was below, therefore concluding gross alpha at OF001 was in compliance for the reporting year.

2.2.1.1 Outfall 001

Runoff from Outfall 011, if any, ultimately flows to Outfall 001. Outfall 011 receives treated stormwater from the advanced treatment system when operational, but stormwater can also be stored in a settling pond where it evaporates during dry weather. During the 2019/20 rainy season, there were three events that produced sampleable discharge at Outfall 001 and none at Outfall 011. From the three events sampled at Outfall 001, a total of eight benchmark exceedances were measured. Four exceedances occurred during the 12/22-26/2019 rain event, three during the 3/10-23/2020 rain event, and one during the 4/10/2020 rain event. It is important to note that Outfall 001 is within the Southern Buffer Zone and the majority of the watershed was never subject to industrial uses.

A brief discussion of reported exceedances is as follows; for more information, a thorough analysis of the causes of exceedances is available in Appendix C:

- Iron at Outfall 001:** Iron was detected above its daily maximum benchmark of 0.3 mg/L on 12/27/2019, 3/24/2020, and 4/10/2020 at Outfall 001. The source is believed to be background soils, based on three independent lines of evidence: (1) the uniform spatial pattern indicates that all outfalls likely shared the same diffuse, site-wide source of iron in stormwater; (2) the outfall stormwater particulate strengths were best explained by background soils out of all the source materials tested (although the iron content of the stormwater particulate strengths – which represent suspended solids that are finer sized than undisturbed soils -- are higher than

the bulk soil samples, likely due to different soil iron concentrations by particle size); and (3) metal ratios (iron to manganese) support natural background soils as the likely source of iron in the exceeding samples.

- **Lead at Outfall 001:** Lead was detected above its daily maximum benchmark of 5.2 µg/L on 12/27/2019 at Outfall 001. Background soils are believed to be a contributing source, based on three independent lines of evidence: (1) the uniform spatial pattern indicates that all outfalls likely shared the same diffuse, site-wide source of lead in stormwater; (2) the outfall stormwater particulate strengths were best explained by background soils out of all the source materials tested (although the lead content of the stormwater particulate strengths – which represent suspended solids that are finer sized than undisturbed soils -- are higher than the bulk soil samples, likely due to different soil iron concentrations by particle size); and (3) metal ratios (lead to iron and lead to manganese) support natural background soils as the likely source of lead in the exceeding samples. A comparison of particulate strengths in stormwater samples and solids concentration in potential source material samples show that the exceeding sample's particulate strength was below the upper range for atmospheric deposition, pavement solids fines, and impacted soils. However, impacted soils are unlikely to be a source of the exceedance at Outfall 001 due to the relatively small quantity of impacted soils in the Outfall 001 watershed. Additionally, preliminary results of the buffer zone subarea study found no elevated lead in stormwater from impacted soil subareas in the buffer zone. This indicates the lead exceedance in stormwater could have come from atmospheric deposition, pavement solids fines, and/or background soils.
- **Manganese at Outfall 001:** Manganese was detected above its daily maximum benchmark of 50 µg/L at Outfall 001 on 3/24/2020. The source is believed to be background soils, based on three independent lines of evidence: (1) the uniform spatial pattern indicates that all outfalls likely shared the same diffuse, site-wide source of manganese in stormwater; (2) the outfall stormwater particulate strengths were best explained by background soils out of all the source materials tested (although the manganese content of the stormwater particulate strengths – which represent suspended solids that are finer sized than undisturbed soils -- are higher than the bulk soil samples, likely due to different soil manganese concentrations by particle size); and (3) metal ratios (iron to manganese) support natural background soils as the likely source of manganese in the exceeding samples.
- **Gross Alpha at Outfall 001:** The highest result for gross alpha (14.1 +/- 3.6 pCi/L) this year was indeterminate compared to the daily max benchmark (15 pCi/L) and that OF001 annual average (3.65 +/- 0.64 pCi/L) was below the annual average benchmark (15 pCi/L), therefore the data indicate that gross alpha at OF001 was in compliance for the reporting year. When there is a gross alpha result above the benchmark, a follow up analysis must be done to determine which radionuclides are present. Man-made and naturally occurring alpha-emitting radionuclides were analyzed. Only naturally occurring alpha-emitting radionuclides were detected. No man-made alpha-emitting radionuclides were detected. This indicates that the gross alpha detected were not from previous industrial activities at the site, but rather a result of natural processes.
- **TCDD TEQ (no DNQ) at Outfall 001:** TCDD TEQ (excluding 'Detected not Quantified ["no DNQ"]') (dioxins) was calculated above the daily maximum benchmark of 2.8E-08 µg/L in samples from

12/27/2019 and 3/24/2020 at Outfall 001. The spatial patterns indicate there was likely a local source contributing to elevated TCDD TEQ (no DNQ) concentrations. A comparison of particulate strengths in stormwater samples and solids concentration in potential source material samples suggests the TCDD TEQ (no DNQ) exceedances in stormwater were likely from pavement solids fines and/or soils near treated wood (utility poles), both of which have been found to be potent sources of TCDD TEQ (100x exceeding stormwater concentrations) through potential source testing data collected by the Surface Water Expert Panel and Geosyntec. Additionally, background soils could not be ruled out due to potentially elevated concentrations in soil fines. Metal ratio fingerprinting further supports background soils as a potential source of TCDD TEQ (no DNQ) in the exceeding samples.

2.2.1.2 Outfall 002

Runoff from Outfall 018 ultimately flows to Outfall 002. Outfall 018 receives stormwater from an advanced water treatment system prior to discharge. Four benchmark exceedances were measured at Outfall 002 during the 2019/20 rainy season. The exceedances occurred for iron and TCDD TEQ (no DNQ) over the course of three rain events. One of the iron exceedances occurred when SWTS-treated discharge from Outfall 018 was comingled with stormwater runoff from the 002 watershed (3/13-3/15/2020). There were no exceedances at Outfall 018 during the 2019/20 reporting year.

A brief discussion of exceedances is as follows; for more information, a thorough analysis of the causes of exceedances is available in Appendix C:

- **Iron at Outfall 002:** Iron was detected above its daily maximum benchmark of 0.3 mg/L on 12/5/2019, 12/24/2019, and 3/14/2020. Iron was detected above its daily maximum benchmark of 0.3 mg/L on 12/27/2019, 3/24/2020, and 4/10/2020 at Outfall 001. The source is believed to be background soils, based on three independent lines of evidence: (1) the uniform spatial pattern indicates that all outfalls likely shared the same diffuse, site-wide source of iron in stormwater; (2) the outfall stormwater particulate strengths were best explained by background soils out of all the source materials tested (although the iron content of the stormwater particulate strengths – which represent suspended solids that are finer sized than undisturbed soils -- are higher than the bulk soil samples, likely due to different soil iron concentrations by particle size); and (3) metal ratios (iron to manganese) support natural background soils as the likely source of iron in the exceeding samples.
- **TCDD TEQ (no DNQ) at Outfall 002:** TCDD TEQ (no DNQ) was calculated to be above the daily maximum benchmark of 2.8E-08 µg/L in stormwater samples collected on 12/24/2019. The spatial patterns indicate there was likely a local source contributing to elevated TCDD TEQ (no DNQ) concentrations. A comparison of particulate strengths in stormwater samples and solids concentration in potential source material samples suggests the TCDD TEQ (no DNQ) exceedances in stormwater were likely from soils near treated wood (utility poles). Additionally, background soils could not be ruled out due to potentially elevated concentrations in soil fines. Metal ratio fingerprinting further supports background soils as a potential source of TCDD TEQ (no DNQ) in the exceeding samples.

2.2.1.3 Long-Term Exceedance Trends

This past reporting year experienced fewer discharges and fewer exceedances than during the reporting years immediately following wildfires (Topanga wildfire in 2005/06 and Woolsey wildfire in 2018/19 [Figure 6]). This is likely due to the post-fire recovery of vegetation, reduced soil hydrophobicity and slightly less rainfall. Results from the 2019/20 rainy season are most similar to the 2016/17 rainy season, which experienced a similar amount of rainfall and number of discharges. It is important to note that within a single discharge sample many parameters are analyzed. For example, if a single sample is analyzed for 49 constituents that have limits and one constituent recorded an exceedance, this means the sample was compliant with the limits for 98% of discharge-constituent combinations.

The general trend of improvement in compliance over time can be attributed to the numerous control measures that have been implemented across SSFL, including demolition of buildings and paved areas, restoration and revegetation measures, natural treatment BMPs and advanced treatment systems, in-channel measures, extensive erosion controls, and stormwater consolidation through pumping and storage (in tanks and ponds). These controls, including activities in 2019/20, are discussed further in Section 3 of this report.

Figure 6. Summary of NPDES Outfall Discharges and “Exceedances” (of both Permit Limits and Benchmarks), 2010/11 to 2019/20

2.2.1.4 Summary

In summary, this past reporting year experienced nine rainfall events, all with relatively low rainfall intensities, and five of which produced discharge at one or more outfalls. Outfall 001 had eight benchmark exceedances, Outfall 002 had four benchmark exceedances, and half of this year’s exceedances were for iron (6 of 12). One storm had a 24-hour rainfall depth that slightly exceeded the design storm for the treatment controls in the Outfall 009 watershed (excluding the Northern Drainage mitigation measures), but only one overflow was observed in the Outfall 009 watershed structural BMPs. This occurred at CM-3 during a storm event smaller than the design storm, and the BMP was

rebuilt before the end of the season. No other BMPs overflowed and no storms exceeded the Outfall 018 or 011 pond capacities.

2.2.2 BMP Performance Monitoring

BMP performance monitoring is not required by the NPDES permit. However, the Expert Panel has recommended that individual BMPs be monitored to assess their relative ability to remove stormwater COCs before they reach the Outfalls. BMP monitoring in the Outfall 009 watershed was conducted throughout the 2019/20 reporting year as outlined in the *2019/20 Rainy Season Sampling and Analysis Plan (SAP) Updates, Best Management Practice (BMP) Monitoring Program ("2019/20 SAP")* (Appendix A to this report) (HAI, 2019). This SAP is updated on an annual basis and will be updated again for the 2020/21 reporting year, as later discussed in Section 5.2.1.

This past reporting year, stormwater samples at BMP performance monitoring locations were collected in the Outfall 009 watershed. At the Panel's recommendation, sampling at the BMP performance locations was temporarily reduced to two samples per year until site activities increase as remediation is initiated. Sampling at the potential BMP subareas to identify additional distributed control locations was discontinued after the 2018/19 reporting year due to improved runoff quality at Outfall 009. Table 7 summarizes the number of samples collected at each BMP monitoring location in the Outfall 009 watershed subareas, as well as the number of copper, lead, mercury, and dioxins results greater than the Outfall 009 Permit limits, for reference only as historical COCs, as the permit limits and benchmarks only apply to the outfall samples. A total of 47 samples were collected. Of these, 25 were BMP influent samples and 24% (6 of 25), 16% (4 of 25), 4% (1 of 25), and 60% (15 of 25) of these samples had concentrations greater than the NPDES outfall Permit limits for copper, lead, mercury, and dioxins, respectively. Focusing on the 17 fully treated (BMP effluent) samples only, 24% (4 of 17), 0% (0 of 17), 0% (0 of 17), and 29% (5 of 17) of these samples had concentrations greater than the NPDES Permit limits for copper, lead, mercury, and dioxins, respectively. It is notable that despite the 16% of influent subarea results greater than the Permit Limit, there were no lead exceedances reported at Outfall 009, suggesting that, working in combination, the distributed BMPs were successful at reducing these lead levels such that exceedances at the Outfall 009 discharge point were absent in this period. Similarly, no dioxin exceedances were reported at Outfall 009, despite 60% of influent samples exceeding the limit.

A BMP Performance Analysis is conducted annually to evaluate the performance of existing treatment BMPs in the Outfall 009 watershed using statistical, temporal, and other data analysis approaches. The 2019/20 reporting year data have been incorporated into the BMP Performance Analysis dataset that was first established in December 2009. Out of many constituents analyzed at the performance monitoring sites, specific COCs were selected for the data analyses based on historical exceedances at Outfall 009, including total lead, total copper¹⁰, and dioxins (TCDD TEQ no DNQ).

This year, as in previous years, the Surface Water Expert Panel has overseen and reviewed the BMP performance analysis and evaluated the results for any new BMP recommendations. Initial analysis results were presented to the Surface Water Expert Panel in a meeting held August 10-11, 2020. The Surface Water Expert Panel received the draft BMP Performance Analysis report in September 2020 and

¹⁰ Copper is not included as a pollutant of concern for the Outfall 009 watershed in the 2015 Expert Panel Work Plan. However, data for total copper are still presented in the paired line plots.

the revised draft in October 2020. Recommendations were developed based on their review of these results and incorporated into the recommendations found in Section 5.2 of this report.

The final report, *2019/20 BMP Performance Analysis, Santa Susana Field Laboratory* (Santa Susana Surface Water Expert Panel and Geosyntec Consultants, 2020b), is provided as Appendix D to this report. Key findings are discussed in Section 4 below.

2.2.3 Outfall 001 and Outfall 002 Subarea Monitoring

To help investigate the cause of ongoing benchmark exceedances in the Outfall 001 and 002 watersheds, beginning in the 2019/20 reporting year, subarea samples were collected in these buffer zone watersheds to characterize runoff from both natural background and potentially impacted sites. Four of the six identified subarea sampling locations had sampleable flow, while two of the locations had no sampleable flow observed in 2019/20. Table 8 summarizes the number of samples collected at each monitoring site, as well as the number of iron, lead, manganese, and dioxins results greater than the Outfall 001 and Outfall 002 benchmarks (Appendix E, Figure 1).

A total of five samples were collected from subareas with potentially impacted soils (i.e., near RFI areas, but not necessarily including them) and two samples were collected from subareas known to be unimpacted, or natural background, soils (i.e., undeveloped without pavement). At least 50% of samples exceeded the benchmark for iron in both the subareas with unimpacted natural background soils (50%, 1 of 2) and impacted soils (60%, 3 of 5). There were no additional parameters above the benchmarks in subarea with impacted soils (Outfall 002 watershed), while there was one sample above the benchmarks each for lead, dioxins, and manganese in the subarea with natural background soils (Outfall 001 watershed), suggesting that elevated concentrations are not directly attributable to impacted soils. These preliminary results suggest that this year's manganese, lead, and dioxin exceedances may be explained by natural background soils, while iron exceedances may be due to natural background soils and potentially impacted soils. A more detailed source investigation is provided in Appendix C to this report. Key findings are discussed in Section 4 below. Lab reports are provided as Appendix B to this report. More data are needed to confirm these preliminary findings, therefore the Panel has recommended for the Southern Buffer Zone subarea sampling program to continue in the 2020/21 rainy season.

Table 8. Outfall 001 and Outfall 002 BMP Subarea Stormwater Monitoring Results, 2019/20 Reporting Year

Site	Type	Site Description	Number of Samples	Results Greater than OF001/OF002 Benchmarks (benchmarks for reference only, as limits apply to permitted outfall locations only)

2.3 Northern Drainage Assessment

As identified in the *Northern Drainage Restoration, Mitigation, and Monitoring Plan (RMMP)* (Haley & Aldrich, 2011), recurring site investigations were performed annually along the Northern Drainage for a duration of five years (2011/12 to 2016/17).

Although the RMMP expired in 2017, a voluntary annual stream walk and inspection of in-channel erosion risk areas and sediment control conditions in the lower portion of the Outfall 009 drainage was conducted on October 19, 2020. No additional stabilization measures or maintenance activities are recommended at this time.

2.4 Outfall 009 Non-Industrial Sources Special Study

To address periodic lead and dioxins exceedances at Outfall 009 despite the implementation of numerous BMPs in the upper watershed, and to follow-up on previous findings that paved subareas had significantly higher stormwater concentrations of exceeding constituents than unpaved subareas (regardless of whether impacted soils were known to exist), the 2015 Work Plan posed the following questions as the basis for a new non-industrial sources special study:

1. Where (spatially) within watershed 009 are dioxins and lead in stormwater predominantly coming from; and
2. What are the predominant sources of constituents in paved subareas -- e.g., pavement material itself (weathered or newly resurfaced), vehicles, treated wood poles, historic shooting range, and/or atmospheric deposition?

The Surface Water Expert Panel and Geosyntec developed the *Special Monitoring Studies for the 009 Watershed* ("Special Study Work Plan") (Santa Susana Surface Water Expert Panel and Geosyntec Consultants, 2015b), which proposed approaches to collect data to further investigate the causes and sources of dioxins and lead in stormwater at Outfall 009. The Expert Panel also recommended offsite sampling and lead isotope sampling in the Northern Drainage during the 2018/19 reporting year. Non-Industrial Sources Special Study was expanded again through recommendations in this Annual Report to include additional potential sources affecting stormwater quality in the Southern Buffer Zone. The frequency and samples dates of these programs are provided in Table 9. A summary report will be made available in 2021, after all monitoring activities have been completed and the results analyzed.

Table 9. Non-Industrial Sources Special Study – Monitoring Events, Planned and Completed

SSFL Site-Wide Stormwater Annual Report | BMP Activities

Activity	Event Frequency	Events Scoped	Events Completed	Completed Event Dates
Southern Buffer Zone Soils Near Treated Wood Poles	Single sampling event	1	0	Planned for 2020/21
Southern Buffer Zone Soils Near Metal Stakes	Single sampling event	1	0	Planned for 2020/21
Southern Buffer Zone Gravel Road Solids	Single sampling event	1	0	Planned for 2020/21

3 BMP Activities

The following sections summarize the construction and demolition activities conducted at SSFL, the BMP activities within each watershed (e.g., new BMPs, inspections, maintenance, etc.), and public involvement within the past year.

3.1 Demolition

DOE demolition activities of buildings in the Radioactive Materials Handling Facility (RMHF) area began in July 2020. Demolition activities are covered by a separate Construction SWPPP which has been reviewed by the Surface Water Expert Panel. Stormwater from this area will flow to the Outfall 018 SWTS.

3.2 New Activities/Maintenance

Outfall/BMP activities and maintenance conducted at SSFL during the past year (e.g., erosion, sediment control, and drainage stabilization inspections, removal of sediment and debris from outfalls following extreme storm events, BMP repairs, etc.) are incorporated by reference through the following quarterly NPDES Discharge Monitoring Reports (DMRs):

- The Boeing Company, 2019a. *Third Quarter 2019 NPDES Discharge Monitoring Report, Compliance File CI-6027 and NPDES No. CA0001309, Santa Susana Field Laboratory, Ventura County, California.* November 15.
- The Boeing Company, 2019b. *Fourth Quarter 2019 NPDES Discharge Monitoring Report, Compliance File CI-6027 and NPDES No. CA0001309, Santa Susana Field Laboratory, Ventura County, California.* February 15.
- The Boeing Company, 2020a. *First Quarter 2020 NPDES Discharge Monitoring Report, Compliance File CI-6027 and NPDES No. CA0001309, Santa Susana Field Laboratory, Ventura County, California.* May 15.
- The Boeing Company, 2020b. *Second Quarter 2020 NPDES Discharge Monitoring Report, Compliance File CI-6027 and NPDES No. CA0001309, Santa Susana Field Laboratory, Ventura County, California.* August 15.

As recommended in the 2018/19 SSFL Site-Wide Stormwater Annual Report (Surface Water Expert Panel and Geosyntec, 2019), the following BMP maintenance, improvement, and monitoring actions were taken this past season:

- **Outfall 008 erosion controls inspected and refurbished:** Assessed condition of post-fire erosion and sediment controls and vegetation reestablishment. Stormwater controls were repaired and supplemented where needed in October 2019. Armoring and vegetation erosion controls are pictured in Figure 7.

Figure 7. Erosion control at OF008 (Armoring)

- **Outfall 009 LOX access road curb extended:** A sandbag berm along the access road was previously used to direct runoff past the end of a curb to slope drain BMPs. The sandbag berm was replaced with an extension to the curb in July 2020 as shown in Figure 8.

Figure 8. LOX Access Road Curb Extension

- **Outfall 009 CM-9 continued to be monitored for signs of clogging:** The CM continues to perform well and has not yet exhibited signs of clogging, despite its long duration of operation.
- **Outfall 009 ELV and biofilter cistern generators added:** Power was out at the site after the Woolsey Fire destroyed the electrical infrastructure. This resulted in the ELV and biofilter not having power to operate for most of the 2018/19 season. To prevent this from happening again, the Expert Panel recommended adding generators to these BMPs which require power for full operation. A generator was added to the ELV system as the main power source, as shown in Figure 9, since electrical lines were not replaced in this area to reduce the risk of future

wildfires. A portable generator is on hand for the biofilter cistern pump as a backup power supply since power was restored to its surrounding area.

Figure 9. New ELV Generator

- **Outfall 009 CM-3 check dam construction and filter media reconstruction:** CM-3 received a heavy load of sediment and vegetation debris in the first storms of 2019/20 which resulted in a thick layer of accumulated material that clogged the BMP. Riprap check dams were installed upstream of CM-3 to capture sediment and debris before the CM and the filter media was replaced as shown in Figure 10. Construction and repairs were completed February 19, 2020.

Figure 10. Check dams upstream of CM-3 (left) and CM-3 looking upstream (right)

- **Southern Buffer Zone utility pole BMPs added:** Media wattles and straw wattles were placed around utility poles throughout the Southern Buffer Zone. Media wattles, as shown in Figure 11 were prioritized near drainages or along roads since these areas facilitate sediment transport and the media provides a higher level of protection.

Figure 11. Media wattle installed around pole in Southern Buffer Zone

- **Outfall 011 Stormwater Conveyance and Treatment System (SWTS) Repaired:** The electrical panel and piping system of the SWTS were damaged in the Woolsey fire. Repairs were started mid-2019 and the SWTS electrical panel was replaced and the system was operational prior to the first storm event in 2019/20.
- **Outfall 018 media filter replacement evaluated:** The media filter at Outfall 018 was destroyed in the Woolsey fire and removed from the site. A new media filter design is in progress to treat the occasional overflows from R2-A Pond. There were no overflow events in 2019/20.
- **Outfall 018 stormwater storage capacity increase feasibility assessed:** The feasibility of increasing stormwater storage capacity to allow more stormwater treatment at the SWTS was explored due to the continued high performance at the Outfall 018 SWTS. With the Outfall 011 SWTS back online the priority for this has diminished and is not considered critical to pursue further at this time.
- **Maintained erosion control material stockpile as feasible:** The late-season timing of the Woolsey fire highlighted the importance of being able to implement erosion controls quickly before a storm event. A stockpile of control measures, such as wattles, are maintained and cycled through at the site so there are always materials available if needed.
- **Tested variety of hydromulch products:** Following the heavy use of hydromulch at the site after the Woolsey fire it was recommended to test several hydromulch products to minimize the potential of the selected product to contribute to stormwater exceedances. Flexterra was determined to be the best candidate considering constituents of concern at the site.

3.3 Public Involvement

Numerous stakeholder groups and members of the public have expressed interest in the stormwater issues at the SSFL at past public involvement activities and Regional Board hearings. To keep these groups and others apprised of progress, and provide an opportunity for public input, periodic public forum meetings and site tours have been held with the Surface Water Expert Panel since 2011 and throughout the duration of the 2015 Work Plan. Additionally, project status reports and submittal documents have been posted on the Boeing project website after major project milestones and prior to public outreach meetings. Table 10 summarizes public involvement activities that have occurred since the 2010 BMP Plan (MWH et al., 2010). The most recent public meeting (remotely, via Zoom) was held

on August 11, 2020. Prior to the meeting, a survey was developed and distributed to the public to gauge topics of interest, which allowed the Expert Panel to tailor the presentation content. The Surface Water Expert Panel presented on the 2019/20 stormwater compliance monitoring results, BMP performance, results from internal subarea stormwater monitoring, and preliminary results of the stormwater constituent source investigation. Although site tours are typically planned as part of the public meeting, a public tour was not possible this year due to coronavirus restrictions on gatherings.

Table 10. Surface Water Expert Panel Public Involvement Activities, 2011-2020

Date	Activity
August 11, 2020	Public meeting (virtual)
July 17 2019	Public meeting and SSFL tour

October 6, 2013	Public meeting and SSFL tour
August 25, 2011	Public meeting
January 22, 2011	Public meeting and SSFL tour

4 Key Findings

Data supporting the following key findings are provided in the analyses referenced above. The following findings significantly shape the BMP and monitoring recommendations presented in Section 5.

- a. **Exceedance counts and concentrations have fallen markedly since last year’s post-fire conditions and water quality conditions have returned to typical levels for the site.**

Based on the decreasing trend of stormwater concentrations after the initial elevated concentrations observed in the first storms following both wildfires, concentrations were expected to continue to decrease back to typical levels for the site. The monitoring results from the 2019/20 season continued this pattern and stormwater concentrations of constituents of concern have returned to typical pre-fire concentrations for the site as shown in Appendix F. Similarly, the number of exceedances decreased markedly compared to last year. Temporal trends are discussed in more detail in Appendix C.

Less frequent and intense storm activity in the 2019/20 reporting year than the 2018/19 reporting year, in combination with the Discharger’s efforts to install post-fire erosion control measures, one year of natural landscape vegetation recovery and subsequent BMP improvements, resulted in fewer stormwater discharges and exceedances. A statistical comparison of rainfall depths and discharge volumes for storm events during pre-fire years, 2018/19 (immediately post-fire), and 2019/20 indicates the site runoff volumes have returned to normal, pre-fire conditions, as summarized in Table 11.

Table 11. Runoff Volume Effects Following the Woolsey Fire Have Diminished

		Storm Size	
		<2 inches	>2 inches
2018/19 vs pre-fire years	Burned Watersheds	Significant increase (7x)	No significant difference
	Unburned Watersheds	No significant difference	No significant difference
2019/20 vs pre-fire years	Burned Watersheds	No significant difference	No significant difference
	Unburned Watersheds	No significant difference	No significant difference

- b. **The stormwater controls and SWTs generally continue to be very effective across the site.**

In the 2019/20 reporting year, there were no exceedances at Outfall 009 (with extensive distributed BMPs) or Outfalls 011 or 018 (with SWTs). Straw wattles and media filled wattles were installed around utility poles along main roads in the Southern Buffer Zone prior to the 2019/20 wet season. More of these BMPs were implemented through the winter which may

have helped reduce the number of exceedances in the later part of the season. Remaining utility poles had BMPs added to them in June and July 2020. A more thorough BMP strategy will be evaluated for areas with continued exceedances.

c. The long-term performance of treatment controls continue to aid in compliance with NPDES Permit limits at Outfall 009.

Performance monitoring of the distributed treatment controls in the 009 watershed demonstrates continued water quality improvement, which supports NPDES compliance at Outfall 009. This past reporting year, all BMP-COC combinations had the same or fewer effluent concentration results above Permit Limits compared to the influent concentrations. Historically, most grouped BMP-COC combinations also showed lower average and maximum exceedance ratios (i.e., exceeding sample concentrations divided by the Permit Limit) for effluent results compared to the influent results.

As shown in Table 12 and Table 13, lead and dioxins reductions are observed for almost all BMP types, based on the median percent change from BMP influent to effluent concentrations. The percent of influent samples greater than the Outfall Permit limit is less than or equal the percent of effluent samples greater than the Permit limits for both lead and dioxins for all BMPs, indicating an improvement in water quality between influent and effluent. Performance analysis results (details in Appendix D) indicate that statistically significant ($p < 0.05$) lead and TCDD TEQ (no DNQ) concentration reductions are occurring between influent and effluent samples at the B-1 media filter, CM-9, CM-1, and upper lot media filter (grouped analyses for these similar controls), along with the southern detention bioswales, and the ELV treatment BMP. Statistically significant concentration reductions between influent and effluent samples were also observed for dioxins at the lower lot biofilter. The administrative area inlet filters were the only BMP that were not performing as expected. Fortunately, the effluent from these is treated again at either the Lower Lot Biofilter or CM-9 and there were no lead exceedances at Outfall 009 this year. The performance of the administrative area inlet filters will be monitored in the coming year and their benefit will be re-evaluated, as noted in Section 5.1.4.

Constituent loads are also being reduced, both because concentrations are being reduced, and because runoff volumes are being reduced by upstream pavement and building removal and stormwater storage in BMPs.

Table 12. Summary of TCDD TEQ (no DNQ) BMP Performance Stormwater Monitoring Results, Since Construction

BMP	Statistically Significant Removal?	Median % Change between Influent and Effluent ¹	% of Sample Concentrations Greater than Outfall Permit Limit	
			Influent	Effluent
B-1	Yes (grouped dataset)	-80% (grouped dataset)	85%	68%
CM-1			76%	58%
CM-3			0%	0%
CM-9			49%	22%
Upper Lot Media Filter			77%	44%
Lower Lot Biofilter	Yes	-99.7%	89%	10%
ELV Treatment BMP	Yes	-98%	33%	13%

Southern Detention Bioswales	Yes	-99.7%	74%	15%
Admin Area Inlet Filter	No	49%	100%	100%

¹ Percent change was calculated using the median influent and effluent concentrations before rounding. Negative values indicate a reduction in effluent concentrations compared to influent sample concentrations.

Table 13. Summary of Lead BMP Performance Stormwater Monitoring Results, Since Construction

BMP	Statistically Significant Removal?	Median % Change between Influent and Effluent ¹	% Greater than Outfall Permit Limit	
			Influent	Effluent
B-1	Yes (grouped dataset)	-40% (grouped dataset)	35%	8.7%
CM-1			37%	18%
CM-3			40%	0%
CM-9			41%	24%
Upper Lot Media Filter			13%	0%
Lower Lot Biofilter	No ²	-6%	11%	3.3%
ELV Treatment BMP	Yes	-40%	17%	0%
Detention Bioswales	Yes	-50%	35%	0%
Admin Area Inlet Filter	No	56%	0%	0%

¹ Percent change was calculated using the median influent and effluent concentrations before rounding.

² Can likely be attributed to the much lower influent lead concentrations to the lower lot biofilter in recent years. Although the percent change as reflected by the median influent and effluent concentrations was found to increase, a decrease between influent and effluent was observed for the average results.

Figure 12 and Figure 13 present summaries of influent and effluent monitoring results for dioxins and lead by BMP group.

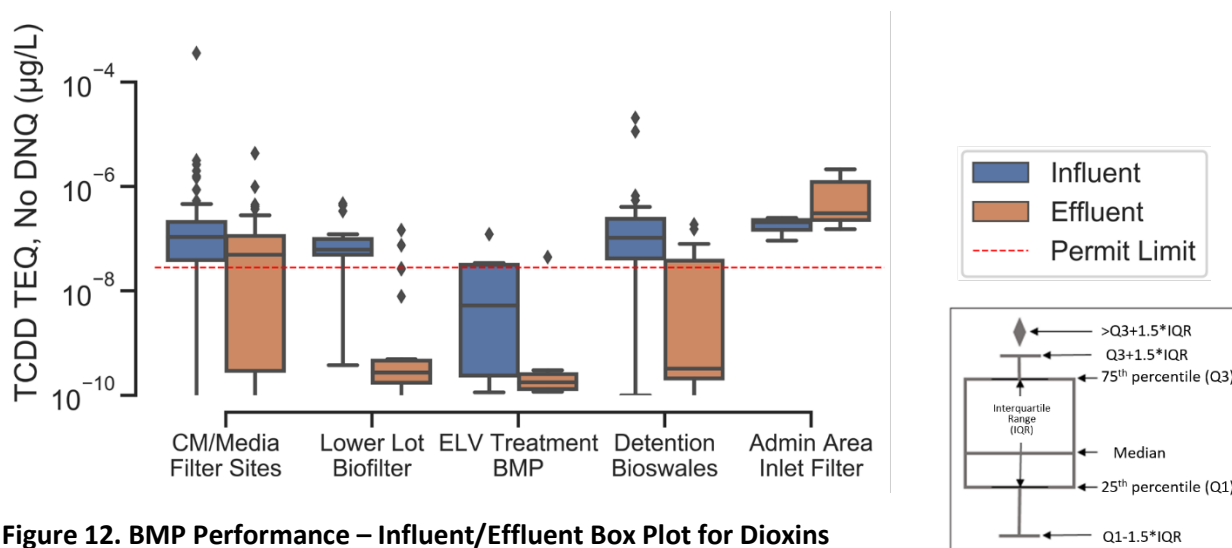

Figure 12. BMP Performance – Influent/Effluent Box Plot for Dioxins

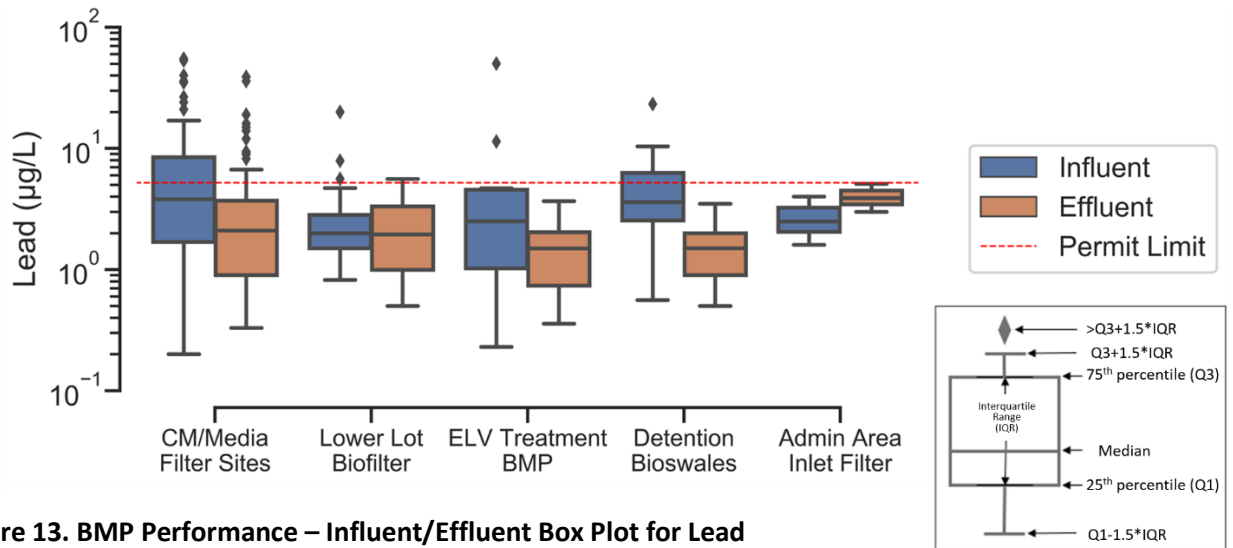

Figure 13. BMP Performance – Influent/Effluent Box Plot for Lead

d. The lower lot biofilter minimizes untreated stormwater runoff from discharging to the Northern Drainage.

Flow monitoring data at the lower lot biofilter examined in the *BMP Performance Analysis* (Appendix D) indicates the low flow diversion is able to prevent smaller storms from discharging to the Northern Drainage without first being treated. As shown in Figure 14, the diversion to the lower lot biofilter successfully prevented just over half of all storms less than or equal to one inch (event total) from discharging to the Northern Drainage.

Figure 14. Binned Presence/Absence of Discharge at the SSFL Biofilter, 2013 to 2020

e. Boeing and NASA continue to implement Expert Panel recommendations.

As described in sections 1.3 and 3.2, recommendations from the Expert Panel continue to be implemented at the site in order to continue to improve stormwater quality. A summary of recommendations from the 2019 Annual Report and their status to-date are provided in Table 14.

Table 14. Summary of 2018/19 Expert Panel BMP Recommendations

Watershed	Recommendation	Status
Outfalls 001 & 002	Begin new subarea monitoring in Southern Buffer Zone to evaluate sources of recent exceedances	Initiated - ongoing
Outfall 008	Condition assessment of post-fire erosion and sediment controls and vegetation reestablishment, and repairing or supplementing where needed	Complete
Outfall 009	Add rock check structure for pretreatment upstream of CM-3, and replace clogged filter media	Complete
Outfall 009	Monitor CM-9 for signs of clogging	Initiated - ongoing
Outfall 009	Add generator as back-up power for biofilter cistern pump	Complete
Outfall 011	Make Stormwater Treatment System (SWTS) operational (including repair of fire-damaged electrical system)	Complete
Outfall 018	Assess feasibility of increasing Silvernale pond capacity to allow more stormwater to be treated by SWTS	Complete - Found to be infeasible
Outfall 018	Assess feasibility of reconstructing Outfall 018 media filter (for treatment of occasional SWTS overflows)	Complete
Southern Buffer Zone	Add filter socks and wattles around treated wood utility poles	Complete
Sitewide	Stockpile erosion control materials as feasible to minimize emergency response time	Complete
Sitewide	Test variety of hydromulch products for NPDES constituents of concern	Complete

f. The Surface Water Expert Panel continues to evaluate stormwater runoff from potentially impacted areas and recommend treatment controls as appropriate.

Based upon the success of subarea sampling guiding BMP prioritization and placement in the Outfall 008 and 009 watersheds, the Surface Water Expert Panel has initiated a similar process in the Outfall 001 and 002 watersheds. Six subarea monitoring locations were identified and monitored over the 2019/20 reporting year. Four of the six locations had sampleable flows, the results for which are shown in Appendix E. Two of the locations sampled runoff from natural unimpacted areas (one each in Outfall 001 and 002) and two locations sampled runoff from potentially impacted areas (again, one each in Outfall 001 and 002). This subarea monitoring program will be continued in order to gather more results for a robust analysis.

g. The recent benchmark exceedances are believed to be due to background soil, soil near treated wood, and pavement solids, however, impacted soils could not be ruled out.

All exceedances during the 2019/20 reporting year were recorded at Outfall 001 and Outfall 002. Both drainages are without major structural treatment controls; however, they are also both almost entirely natural and undeveloped except for a number of power poles, a few gravel roads, and a small paved area (paving in Outfall 001 only). Preliminary subarea sampling in the Outfall 001 and 002 watersheds indicates similar conditions in background and potentially impacted areas. The preliminary conclusion from this is that background soils are responsible for water quality in these areas. However, potentially impacted soils could not be ruled out at this point. It is the goal that continued targeted sampling at the Outfall 001/011 and 002/018 drainage divides will provide enough data to eventually rule out or support impacted soil contributions. Due to highly natural landcover within both watersheds, it is most likely that these exceeding constituents are coming from natural soil mobilized through erosive storm events.

Table 15. Summary of Exceeding Constituent Source Assessment

Exceeding Parameter	Likely Sources
Iron	Natural background soils
Lead	Natural background soils, pavement solid fines
Manganese	Natural background soils
Dioxins	Natural background soils, pavement solid fines, soils near treated wood
Gross Alpha*	Natural sources (only naturally occurring radionuclides detected)

*Quarterly Monitoring Report reported one exceedance for gross alpha (14.1 +/- 3.6 pCi/L), but noted this result was indeterminate compared to the daily max benchmark (15 pCi/L) and that OF001 annual average (3.65 +/- 0.64 pCi/L) was below the annual average benchmark (15 pCi/L), therefore concluding gross alpha at OF001 was in compliance for the reporting year.

h. Cumulative sediment loading calculations for the BMPs have aligned with what lab column tests predicted for sediment loading before requiring maintenance.

The *BMP Performance Analysis* (Appendix D) evaluated the cumulative TSS loading to the ELV treatment BMP, lower lot biofilter, B-1 media filter, upper lot media filter, CM-1, CM-3 and CM-9, and compared each to the estimated value of cumulative sediment¹¹ loading to the media before initial maintenance is needed based on column tests (Pitt, R.E. and Clark, S.E., 2010). The time to maintenance calculation assumes average rainfall for future years and considers the BMP drainage area characteristics and the annual average percent volume capture. Table 16 summarizes the current status of each BMP. All BMPs will continue to be monitored for clogging, however, given the short timeframe estimated until maintenance is needed for CM-9, its performance will be closely observed throughout the coming year. CM-1 was reconstructed in 2018 and is now has an estimated sediment loading of 27% with approximately 6 years until maintenance is needed.

¹¹ In the event that an effluent sample was collected without a parallel influent sample, the average of all TSS influent samples at the BMP was used to represent the influent loading of TSS during this specific event. If TSS loadings were estimated for storm events that were not sampled for the given BMP, the average of all TSS influent samples at the BMP was used to represent the influent loading of TSS during this specific event.

Table 16. Percent of Cumulative Sediment Loading until Clogging

BMP	Wet Seasons in Operation	Cumulative TSS load (kg)	% of “sediment load to the media until maintenance is needed”	Number of average years until media replacement is expected
ELV Treatment BMP	7	90	9.2%	30
Lower Lot Biofilter	7	925	8.6%	36
B-1	9	458	49%	5
Upper Lot Media Filter	4	163	13%	27
CM-1 ¹	2	80	27%	6
CM-9	11	240	82%	1

¹Restarted in 2018/2019 after BMP reconstruction and media replacement. Prior to reconstruction in August 2018, CM-1 was estimated to have approximately 400 kg of cumulative TSS loading after nine rainy seasons in operation.

i. Long-term BMP performance, as measured by effluent concentrations over time, has proven to be steady despite many years of BMP operation.

Effluent concentrations have remained constant over time indicating structural controls continue to perform as expected. This indicates no chemical breakthrough has occurred. For example, Figure 15 shows dioxin concentrations at media filter type BMPs over time. Additionally, influent and effluent particulate strengths are not changing over time, which indicates no particulate breakthrough or notable media export has occurred. Figure 16 shows the consistent particulate strengths recorded at CM-9 since the BMP’s construction. Long-term performance confirms no deterioration in pollutant removal despite a decade of operation in some cases, and despite multiple different media configurations. Long-term BMP performance and sediment loading is discussed in more detail in a forthcoming journal article by the Surface Water Expert Panel.

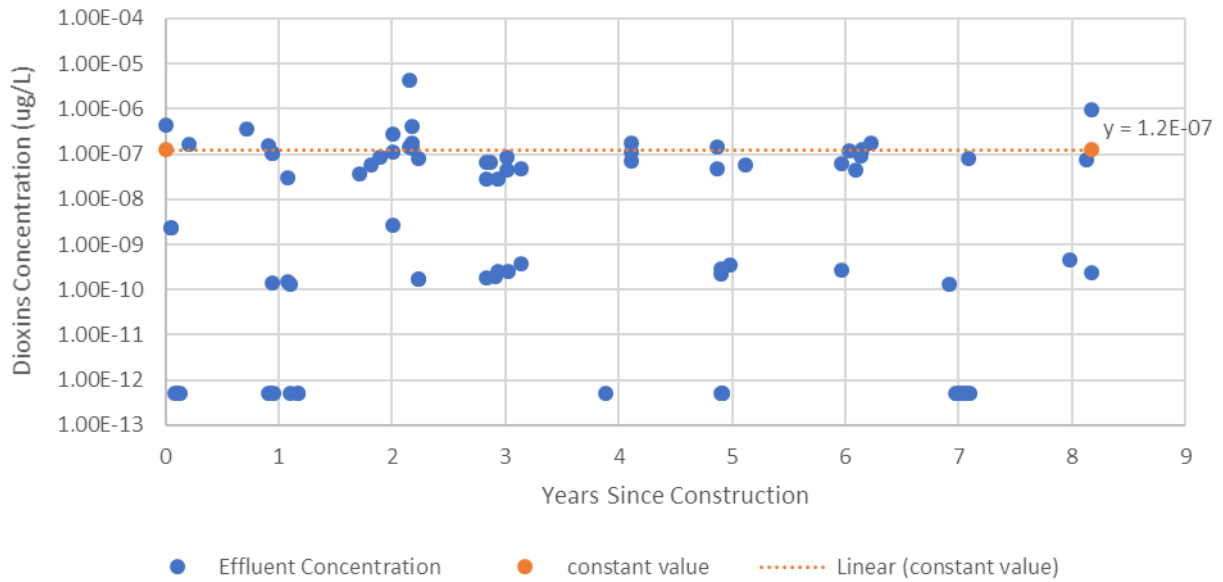

Figure 15. Long-Term Effluent Dioxins Concentrations at Media Filters (B-1, CM-1, CM-9, and Upper Lot Media Filter)

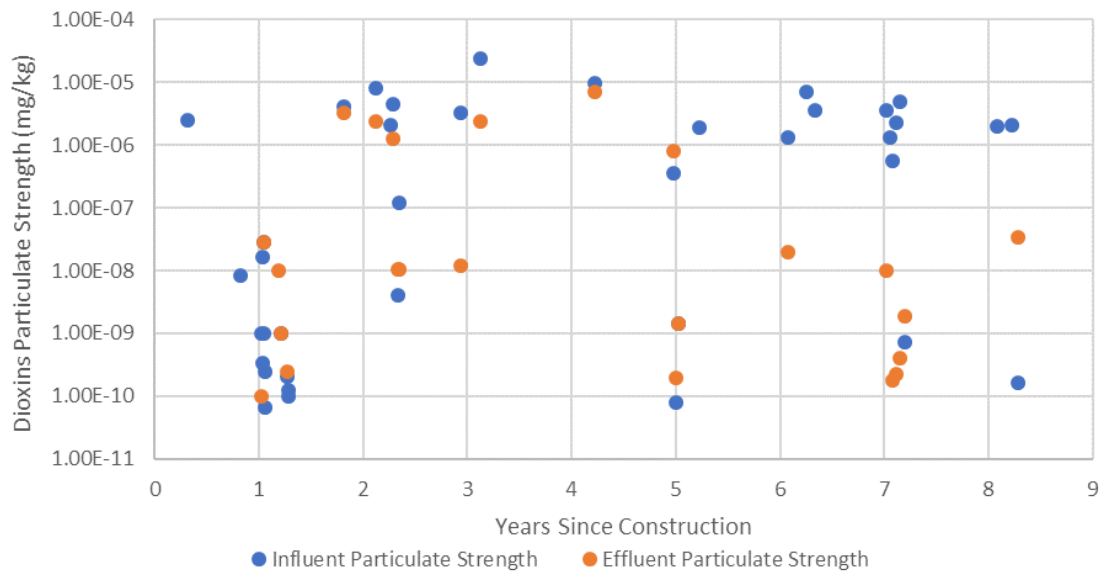

Figure 16. Long-Term Influent and Effluent Dioxins Particulate Strength at CM-9

5 Recommendations

5.1 BMP Recommendations

The following sections outline the proposed BMP recommendations for the Outfall 001, 002, 008, 009, 018 watersheds, although only Outfalls 001 and 002 had benchmark limit exceedances during the past reporting year, and no outfalls had permit limit exceedances.

5.1.1 Site-Wide Recommendations

The Expert Panel recommends identifying and evaluating the feasibility of removing unnecessary treated wood utility poles and other treated wood, and adjacent soils where staining is observed (prioritizing those adjacent to pavement, storm drains, unpaved roads, and drainages) to prevent or reduce the mobilization of adjacent soils containing pollutants.

Continue to have the Expert Panel receive and review all demolition (demo) and cleanup SWPPPs site-wide to help ensure that robust construction BMPs are used during these important projects.

The Expert Panel recommends continuing to monitor the condition of existing erosion and sediment controls and vegetation across the site and repairing or supplementing where needed.

5.1.2 Outfall 001 and Outfall 002 Watersheds

As discussed in Section 2.2.1, the Expert Panel found that the weight of evidence supports a conclusion that most exceedances of NPDES limits were associated with the erosion of natural background soils. Therefore, the Expert Panel recommends evaluating areas for erosion risk and adding erosion controls as necessary.

The Expert Panel also recommends installing non-flammable media wattles around the remaining bare treated wood utility poles in the Southern Buffer Zone (prioritizing those adjacent to pavement, storm drains, unpaved roads, and drainages due to enhanced mobilization in these areas) to prevent or reduce the mobilization of adjacent soils containing pollutants.

The subarea monitoring data in these areas should be evaluated through statistical analysis to identify any critical subwatersheds.

5.1.3 Outfall 009 Watershed

There were no NPDES exceedances at Outfall 009 this year, so no new treatment BMPs are recommended in this watershed. Existing BMPs should continue to be observed and repaired as needed.

The Expert Panel recommends observing the newly reconstructed CM-3 this year to ensure it continues to function as expected. Also, it is recommended to evaluate if the ELV system should be retrofitted to contain the filter media and prevent washout. As-built plans will be reviewed to determine the current design of the system. If no as-builts are available, the BMP will have to be inspected physically to determine if a retrofit is recommended.

Based on cumulative solids loading calculations, it is estimated that CM-9 has approximately one year until initial maintenance is needed. CM-9 should be closely watched in the coming year to look for signs of clogging.

The Expert Panel recommends continuing to maintain check dams in the Northern Drainage and remove accumulated sediments as needed to preserve their function.

Although the administrative area inlet filters do not appear to be performing as desired, it is recommended to maintain them, leave them in place, and continue to monitor. Their benefit will be evaluated again once enough samples have been collected to statistically evaluate their performance and the need to retain them, remove them, or replace them with more effective controls.

5.1.4 Outfall 018 Watershed

The SWTS at Silvernale treats runoff captured in the R-2A pond before discharging at Outfall 018. A flow-through media filter was originally designed and constructed on the spillway between R-2A and Outfall 018 to provide back-up treatment in the rare event the R-2A pond overflows during larger storms. The flow-through media filter was destroyed in the Woolsey wildfire and in 2019 the Expert Panel recommended evaluating the need for and feasibility of reconstructing a media filter. It was decided that in order to retain the capacity to treat a portion of future overflow, the Expert Panel recommends constructing a flow-through media filter.

5.2 Monitoring Recommendations

The sections below outline recommendations made by the Expert Panel with respect to stormwater monitoring of potential and existing BMP subareas as well as water level and flow bypass monitoring at specific BMPs in the Outfall 009 watershed, continuation of as-needed inspections along the Northern Drainage, and potential additions to the non-industrial source special study.

5.2.1 Stormwater Monitoring

Informed by the data analyses performed above, the Expert Panel recommends the following changes for the 2020/21 stormwater monitoring program, as documented in the *2019/20 Sampling and Analysis Plan (SAP) Updates, Best Management Practice (BMP) Monitoring Program* (Haley & Aldrich, 2019):

- Continue to sample all Outfall 009 BMP performance sites during two events per year. This temporary reduced sample frequency reflects the reduction in site activities within the Outfall 009 watershed anticipated for next year (e.g., limited ISRA, construction, demolition, etc. planned). The Panel will revisit all voluntary (i.e., not required by the NPDES Permit) monitoring frequencies when SSFL site remediation activities increase.
- Continue to complete full BMP performance inspection checklists for all BMPs which includes visiting each during every storm event to observe whether there is stormwater discharging and again 72 hours after the end of the rain event to observe if any ponded water remains.
- Continue subarea monitoring in Outfall 001 and 002 watersheds to evaluate sources of constituents found in stormwater at these outfalls.
- Continue to hold off on monitoring at Northern Drainage subarea sampling locations. If a lead exceedance is measured at Outfall 009, reevaluate monitoring at these locations, or at one site downstream of the shooting range.
- Continue to also analyze for the filtered form of each metal when total metals are already being analyzed in outfall samples as required by the permit.
- Collect stormwater samples from DOE RMHF demo area during first two storm events of the 2020/21 rainy season and analyze for the monitoring suite required at Outfall 003, the watershed where this area is located.

5.2.2 Northern Drainage

As specified in the RMMP, 2016/17 was the last year of required geomorphic monitoring. As such, near-term monitoring and maintenance should focus on NPDES compliance needs only. A continued annual assessment of sediment delivery and erosion along this important reach of drainage is recommended.

5.2.3 Non-Industrial Source Special Study

Initial monitoring activities associated with the Non-Industrial Source Special Study are now completed, as specified in Section 2.4. Additional activities recommended in the 2019/20 Annual Report are either complete, in progress, or planned for the start of the 2020/21 rainy season. A summary presentation and paper will be prepared in 2021.

Additional sampling of soils near metal stakes/pipe supports and gravel road solids in the Southern Buffer Zone was recommended after evaluating the Outfall 001 and 002 monitoring results from the 2019/20 reporting year. These samples will be evaluated for gross alpha, metals, and dioxins for the same three particle sizes evaluated in previous special studies sampling plans (<75 um and 75-1000 um, and >1000 um).

5.2.4 Bell Canyon Sampling

In response to continued public concerns expressed about sources of dry weather flow downstream of Outfall 002 and based on observations along this creek by the Expert Panel in 2019, the Expert Panel recommends a one-time dry weather sampling event, if feasible based on property access or other potential limitations, to assess potential flow contributions from non-SSFL private property along Bell Creek such as landscape irrigation, septic effluent, other discharges, and localized non-SSFL non-stormwater runoff above the North Buckskin Court bridge.

6 Milestones/Schedule

Following BMPs/treatment control implementation, effectiveness of these measures will be evaluated primarily by the results of surface water samples collected at outfalls, supplemented by any subarea data collected as part of the 2015 Work Plan. These sampling results will continue to be reviewed annually to determine whether additional upgrades or maintenance may be warranted. If required, a Work Plan Addendum may be submitted for LARWQCB review and approval. The following milestones are planned for the remainder of the NPDES Permit term.

2020/21

Future Expert Panel activities to be determined based on new Permit requirements and Boeing's requests for Expert Panel involvement.

Subject: 2019/2020 Rainy Season Sampling and Analysis Plan (SAP) Updates,
Best Management Practice (BMP) Monitoring Program
Santa Susana Field Laboratory
Canoga Park, California

Dear Mr. Zorba and Mr. Wokurka:

This letter presents the sampling and analysis plan (SAP) updates to the Best Management Practice (BMP) subarea and BMP performance monitoring programs within the Outfalls 001, 002 and 009 watersheds at the Santa Susana Field Laboratory (SSFL) for the 2019/2020 rainy season, and serves as an addendum to the 2015/2016 and 2016/2017 rainy season SAPs (MWH Americas, Inc. [MWH], 2015; 2016) and the 2017/2018 and 2018/2019 SAPs (Haley & Aldrich, 2018; 2019). BMP subarea monitoring is conducted at locations receiving runoff from potential source areas and other infrastructure (e.g., roads, buildings, parking areas) to evaluate the potential for contribution of constituents of concern (COCs) from the potential source areas to stormwater runoff and to identify locations for new BMPs. BMP performance monitoring is conducted at BMPs (e.g., Lower Parking Lot BMP, B1436 detention bioswales) to assess the effectiveness of the structural BMPs at promoting sediment settling and improving surface water quality to comply with NPDES permit limits at Outfalls 001 and 009.

The updates to the BMP monitoring program SAP for the 2019/2020 rainy season account for field observations of monitoring locations during the 2018/2019 rainy season and an evaluation of surface water sampling data collected to date, and are described below. In addition, attached to this letter are 2019/2020 rainy season versions of the SAP tables and figures as well as standardized BMP inspection forms. The changes described in this letter were developed with input from, and in accordance with, the recommendations from the SSFL Surface Water Expert Panel (Expert Panel) and Geosyntec Consultants (Geosyntec), and were initially presented in the 2018/2019 Site-wide Stormwater Annual Report (Surface Water Expert Panel and Geosyntec Consultants, 2019).

BMP Monitoring Updates

OUTFALL 001

Monitoring at CABMP0001 is discontinued, as the 2018 Woolsey Wildfire introduced unknown variables to make before and after demo sampling comparisons impossible.

BMP monitoring locations to be added to assess potential flow contributions from landscape irrigation, septic effluent, other discharges, and localized non-stormwater runoff above the North Buckskin Court bridge in the Outfall 001 watershed:

- New potential BMP subarea monitoring location (EPSW001BG01) to characterize natural background unimpacted areas; located at the low spot along Bell Canyon Road and north of the road heading to Outfall 001.
- New potential BMP subarea monitoring location (EPSW001IE01) to evaluate impacted soils (A1BP, CTL-V); located at the bottom of the hill to the north of the intersection of the Southern Buffer Zone Road and Outfall 001 Road.
- New potential BMP subarea monitoring location (EPSW001PV01) to characterize background impacted areas; paved areas; south side of the road heading towards Outfall 001 at the intersection of Outfall 001 road and Bell Canyon Road.

Sampling at the new potential BMP subarea monitoring locations listed above will be collected during every rain event.

OUTFALL 002

BMP monitoring locations to be added to assess potential flow contributions from landscape irrigation, septic effluent, other discharges, and localized non-stormwater runoff above the North Buckskin Court bridge in the Outfall 002 watershed:

- New potential BMP subarea monitoring location (EPSW002BG01) to characterize natural background unimpacted areas; located past the second water guzzler just before the steep incline into Outfall 002. Road delineator to the west of culvert.
- New potential BMP subarea monitoring location (EPSW002IE01) to evaluate impacted soils; located at STL-IV immediately past the gates to the south east; adjacent to the new telephone pole.
- New potential BMP subarea monitoring location (EPSW002IE02) to evaluate impacted soils; located along the Southern Buffer Zone Road at the culvert inlet on the north side of the road. Approximately 400 feet east of the turnout.

Sampling at the new potential BMP subarea monitoring locations listed above will be collected during every rain event.

OUTFALL 009

Discontinue sampling at all subarea sites in the Outfall 009 watershed, which include:

- ILBMP0001
- EVBMP0002
- A2BMP0008
- A2BMP0009
- A2BMP0011
- EVBMP0010
- APBMP0001

BMP SAMPLING ACTIVITIES 2019/2020 SAP UPDATES

- Sample all active BMP performance sites twice a year. See above for new BMP subarea sites sampled every rain event.
- Discontinue monitoring at Northern Drainage sampling locations EPNSW07, EPNSW01, EPNSW02, EPNSW03, EPNSW04, EPNSW06, and BGBMP0004 (EPNSW05). If a lead exceedance is measured at Outfall 009, reevaluate monitoring at these locations, or onsite downstream of the shooting range.

BMP INSPECTION FORMS

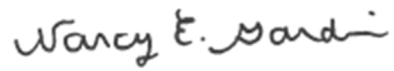

The BMP inspections will be conducted during every monitored event and once after the rainy season using the “BMP Inspection Forms”. These forms include observations, maintenance needs, and corrective actions and were revised to reflect current field conditions. As specified on each form, a standardized framed photo should be taken at the same location, facing the same direction, at each site visit. BMP inspection forms for Boeing locations were revised for the 2017/2018 rainy season to accommodate electronic data entry on a field tablet.

72 hours after the end of each rain event, field crews will also inspect and record maximum ponding levels at locations listed in the “Boeing 72 Hours After Rain Event Ponding Inspection Form” and “NASA 72 Hours After Rain Event Ponding Inspection Form”. These forms will be completed after every rain event at all of the listed locations.

Sincerely yours,

EPSW001BG01	Boeing	OF001 Watershed	Background (natural unimpacted areas)	Potential BMP Location	Located at the low spot along Bell Canyon Road and north of the road leading to Outfall 001.	Every Storm				X	X		X	X	X	X	X
EPSW001IE01	Boeing	OF001 Watershed	Impacted Soils Evaluation (A1BP, CTL-V)	Potential BMP Location	At the bottom of the hill to the north of the intersection of the Southern Buffer Zone Road and Outfall 001 Road.	Every Storm				X	X		X	X	X	X	X
EPSW001PV01	Boeing	OF001 Watershed	Background (with paved areas)	Potential BMP Location	South side of the road heading towards Outfall 001 at the intersection of Outfall 001 road and Bell Canyon Road.	Every Storm				X	X		X	X	X	X	X
EPSW002BG01	Boeing	OF002 Watershed	Natural Background	Potential BMP Location	Located past the second water guzzler just before the steep incline into Outfall 002. Road delineator to the west of culvert.	Every Storm				X	X		X	X	X	X	X

TABLE I
 BMP MONITORING INSPECTION LOCATIONS AND ANALYTICAL PLAN
 2019/2020 RAINY SEASON
 SANTA SUSANA FIELD LABORATORY
 CANOGA PARK, CALIFORNIA

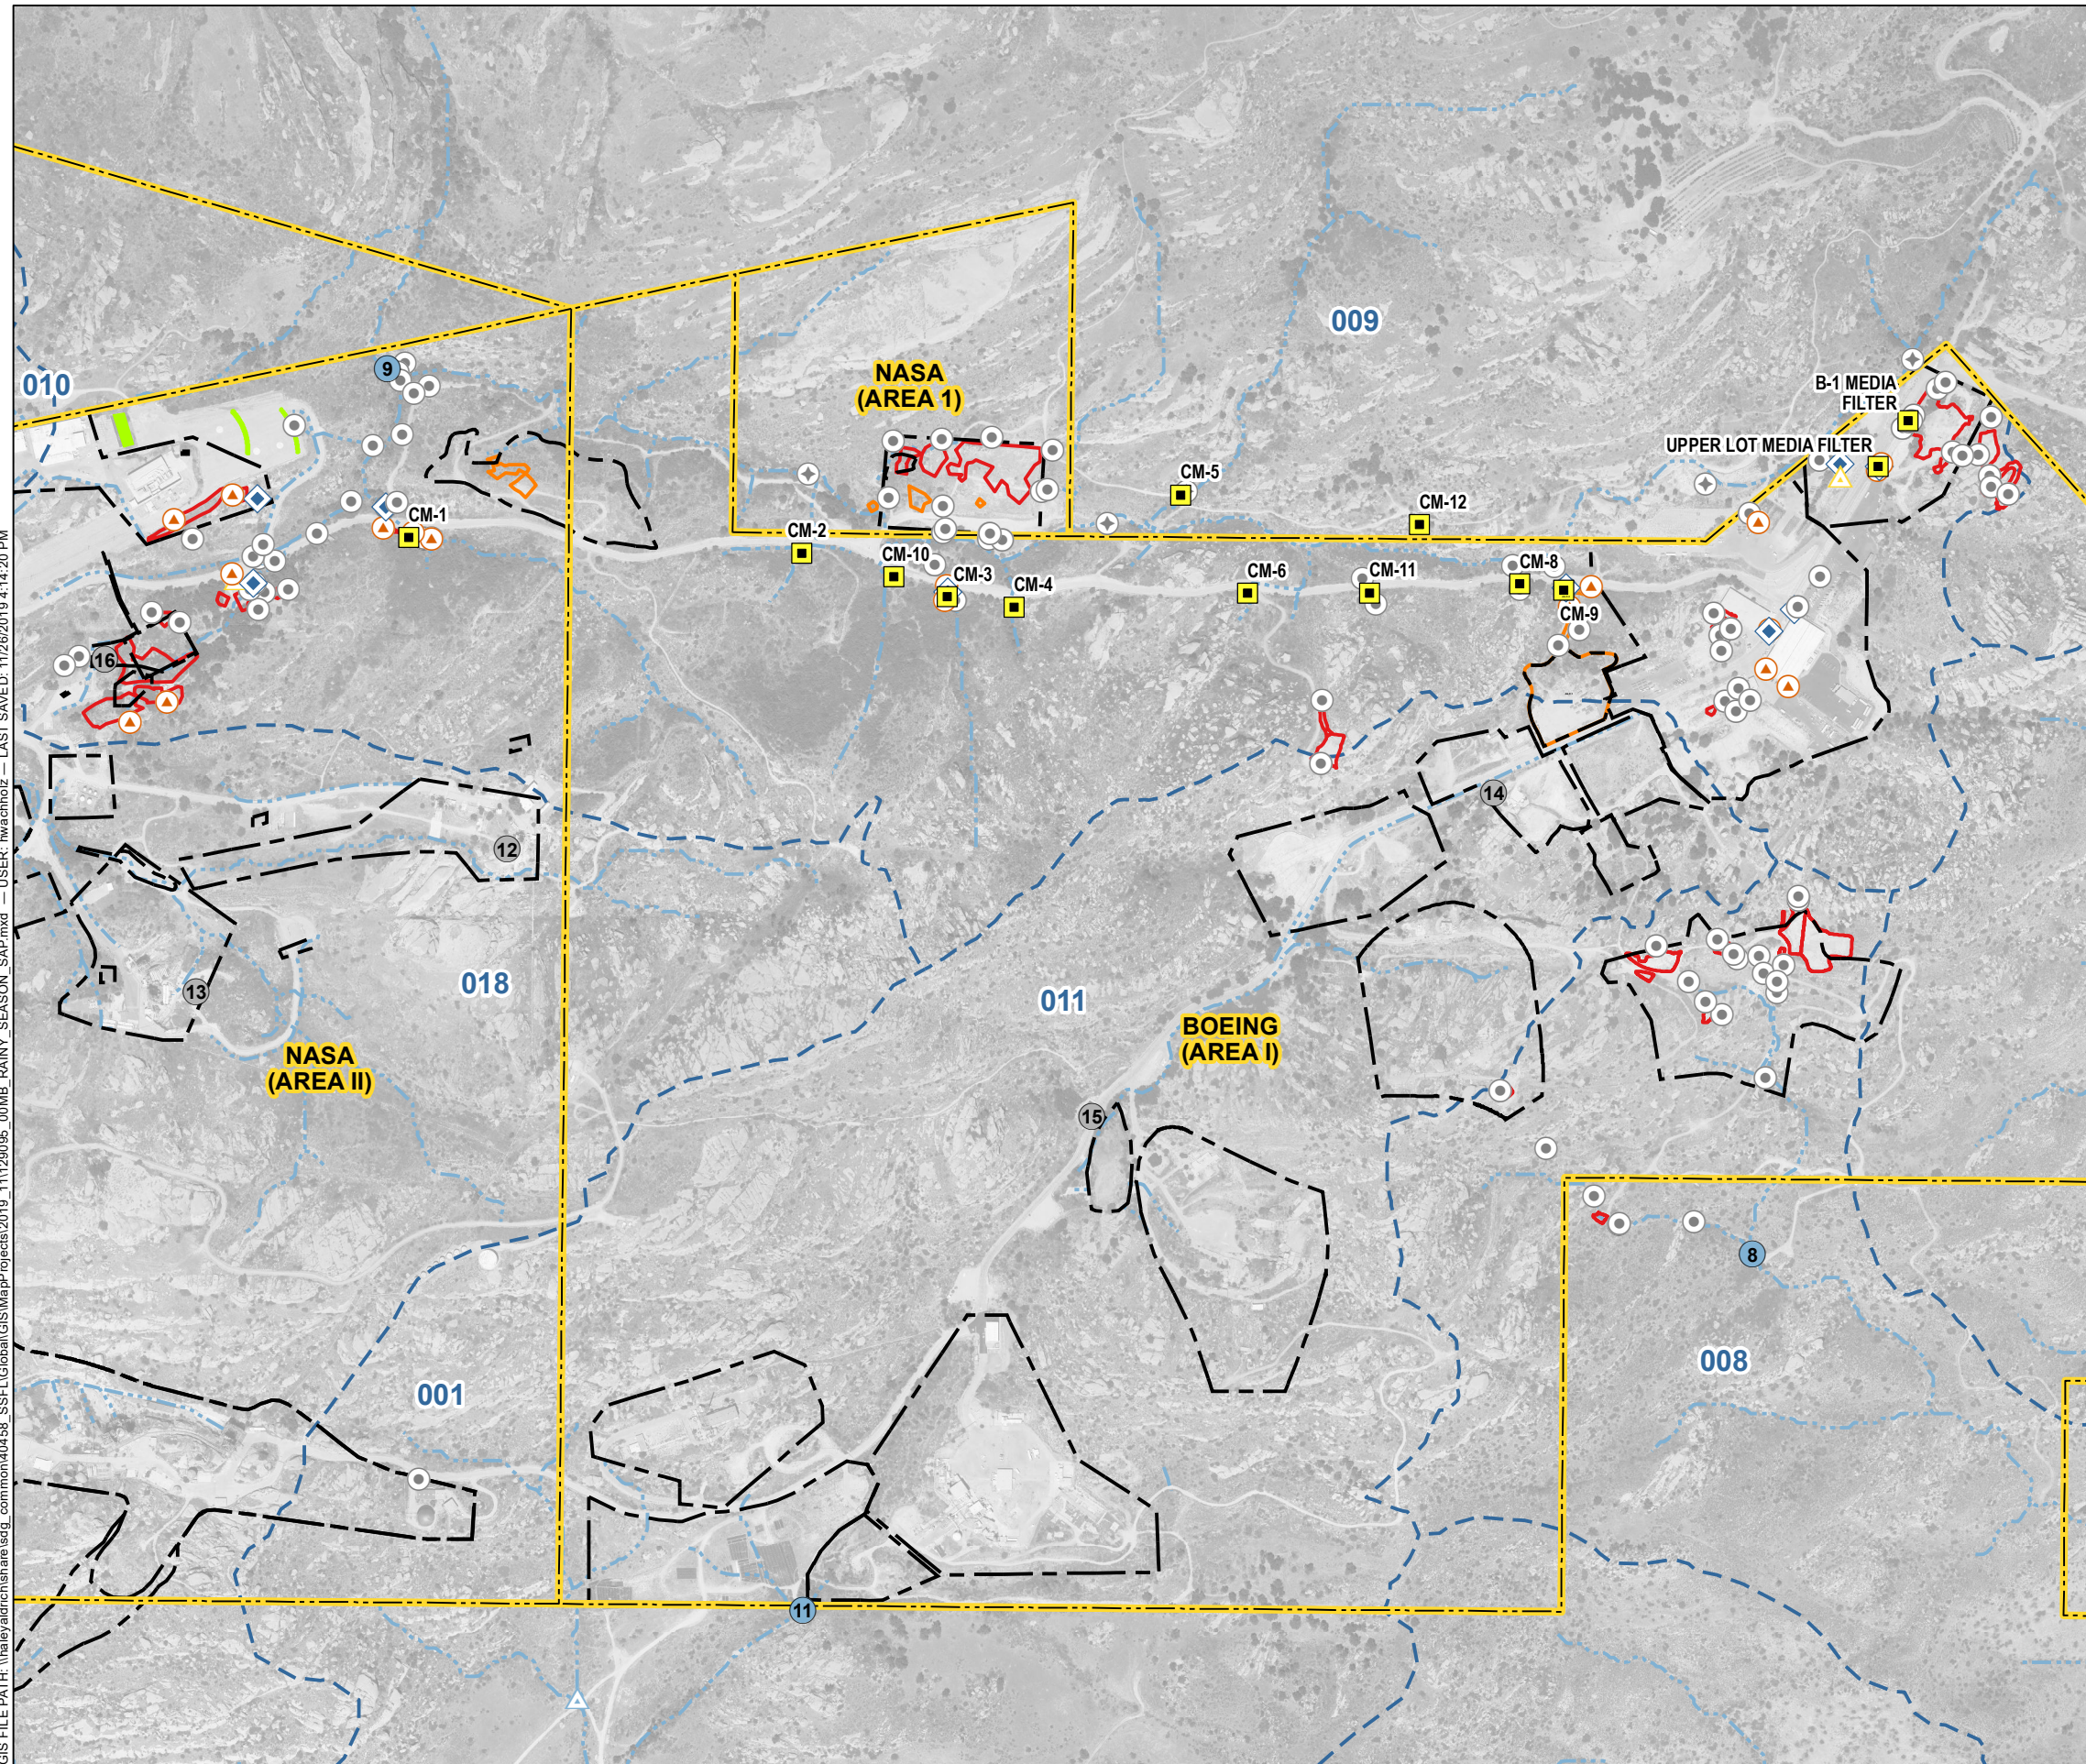

Object ID	Sampling Responsibility	Location	Areas Monitored	Purpose	Notes	Sample Frequency	Cd, Cu, Pb (Total Dissolved) (Method 200.7/200.8) Hg (Total Dissolved) (Method 245.1)	Cd, Cu, Pb (Total Recoverable) (Method 200.7/200.8) Hg (Total Recoverable) (Method 245.1)	Dioxins (Method 1613)	Total Suspended Solids (Method 2540)	Particle Size Distribution (Method ASTM D422)	Turbidity (Method 180.1)	As, Cd, Cu, Fe, Pb, Mn, Se, Zn (Total Dissolved) (Method 200.7/200.8) Hg (Total Dissolved) (Method 245.1)	As, Cd, Cu, Fe, Pb, Mn, Se, Zn (Total Recoverable) (Method 200.7/200.8) Hg (Total Recoverable) (Method 245.1)	SO4 (Method 300)	Gross Alpha (Total Dissolved) (Method 900.0)	Gross Alpha (Total Recoverable) (Method 900.0)
EPSW002IE01	Boeing	OF002 Watershed	Impacted Soils Evaluation (STL-IV)	Potential BMP Location	At STL-IV. Immediately past the gates to the south east; adjacent to the new telephone pole.	Every Storm			X	X			X	X	X	X	X
EPSW002IE02	Boeing	OF002 Watershed	Impacted Soils Evaluation (Coca)	Potential BMP Location	Located along the Southern Buffer Zone Road at the culvert inlet on the north side of the road. Approximately 400 feet east of the turnout.	Every Storm			X	X			X	X	X	X	X

Notes:
 * Collect one equipment blank per sampling day from the equipment used to sample the B1436 Detention Bioswales downstream monitoring location (under drains) and place on hold for metals and dioxins analysis; the analyses will be performed if unusual results are reported for primary samples. The EB sample ID will be based on the ID of the primary sample collected immediately before collecting the equipment blank, and will either be ILQW0005_yyyyymmdd or ILQW0007_yyyyymmdd.

Abbreviations:
 CM - Culvert Modification
 DS - Downstream
 US - Upstream
 X = Collect and Analyze

Inspection Checklist Questions: *Inspection Answers:*

During Rain Event Inspection

Any odors, suspended materials, floating material, etc. observed?	No/Yes/NA with comment
Are erosion/sediment controls in good condition?	No/Yes/NA with comment
Are upstream areas free of erosion or sediment?	No/Yes/NA with comment
Is there flow overtopping the riser structure?	No/Yes/NA with comment
If above is YES, does the underdrain appear to be constricted?	No/Yes/NA with comment
If above is YES, please record a video.	N/A
Is there flow in the riser structure?	No/Yes/NA with comment

72 Hours After the End of the Rain Event Inspection

Any odors, suspended materials, floating material, etc. observed?	No/Yes/NA with comment
Are erosion/sediment controls in good condition?	No/Yes/NA with comment
Are upstream areas free of erosion or sediment?	No/Yes/NA with comment
Are underdrain(s) clear of unwanted sediment/debris?	No/Yes/NA with comment
Is there ponded water in the Biofilter?	No/Yes/NA with comment
If above is YES, record approximate depth from top of riser structure under comments	Depth
Are percolation holes in the concrete apron (at the sediment basin effluent pipe) clear of unwanted sediment/debris?	No/Yes/NA with comment

Corrective action identified during this inspection event: No/Yes/NA with comment

Notes:

Additional Observations:

*Qualitative Flow Observations:		
No Flow	NPDES Permit Limits:	ALL RECEIVING AND SAMPLE COLLECTION BOTTLES MUST BE PRE-RINSED 3 TIMES WITH SOURCE WATER, PRIOR TO COLLECTION OF THE SAMPLE.
Low Flow: Trickle or minor amount of flow.	Temperature < 86 °F	
Moderate Flow: Water is flowing normally, no significant erosion or turbid water.	pH 6.5 - 8.5	EXCEPTION IS THE HNO3 (NITRIC) PRESERVED POLY BOTTLES - DO NOT PRE-RINSE THE HNO3 PRESERVED POLY'S
High Flow: Significant water flow/velocity, slope erosion.

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Laboratory: Eurofins TestAmerica, Irvine

Narrative

Job Narrative 440-255230-1

Comments

No additional comments.

Receipt

The samples were received on 11/21/2019 2:35 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 0.5° C and 1.9° C.

Receipt Exceptions

FB_20191120 (440-255230-6) For sample FB was received one amber Glass 1 l . On the COC were listed two Poly 1L containers

Dioxin

Method 1613B: EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV120219). The 13C-1,2,3,4-TCDD and 13C-1,2,3,7,8,9-HxCDD associated with the following samples run on instrument 3D5 exceeded this criteria: B1BMP0009_20191120 (440-255230-1), B1BMP0010_20191120 (440-255230-2), B1BMP0011_20191120 (440-255230-3), ILBMP0009_20191120 (440-255230-4), ILBMP0010_20191120 (440-255230-5), (CCV 320-342749/2), (LCS 320-341282/2-A), (MB 320-341282/1-A) and (WDM 320-342749/1). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Subcontract non-Sister

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Dioxin Prep

Method 1613B: Elevated reporting limits are provided for the following samples due to insufficient sample provided for 1613B_Sox_Sep_P preparation/analysis: Samples B1BMP0009_20191120 (440-255230-1), B1BMP0010_20191120 (440-255230-2), B1BMP0011_20191120 (440-255230-3) and ILBMP0010_20191120 (440-255230-5) were provided in wide-mouth amber glass bottles.

preparation batch 320-341282
Method: 1613B_Sox_Sep_P / 1613B
Matrix: Aqueous

Method 1613B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 320-341282. As per client guidelines in the associated QAS, QCs are MB/LCS.

Method: 1613B_Sox_Sep_P / 1613B
Matrix: Aqueous

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Subcontract Work

Method Particle Size: This method was subcontracted to Eurofins TestAmerica, Irvine. The subcontract laboratory certification is different from that of the facility issuing the final report.

Definitions/Glossary

Client: Haley & Aldrich, Inc.
Project/Site: BMP Performance of 009 Watershed

Job ID: 440-255230-1

Qualifiers

Dioxin

Qualifier	Qualifier Description
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL
MB	Analyte present in the method blank
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.

Metals

Qualifier	Qualifier Description
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Re: IGL File No: **49159**
Project Name: SSFL BMP.
Project Number: N/A
Site Location: SSFL

Subject: Final Report: Laser Particle Size Analysis – (ASTM D4464)

Dear Urvashi Patel,

As you may have been informed, Integrated Geosciences Laboratories, LLC acquired PTS Laboratories effective September 1, 2019. Therefore, all communications regarding future and current projects (including this) are being executed in the new name.

Please find enclosed report for Physical Properties analyses conducted upon **five (5)** fluid sample received from your “**SSFL BMP**” project. All analyses were performed by applicable ASTM, EPA, or API methodologies. The samples are currently in storage and will be retained for fifteen days past the completion of testing at no charge. Please note that the samples will be disposed of at that time. You may contact me regarding storage, disposal, or return of the samples.

Integrated Geosciences Laboratories appreciate the opportunity to be of service. If you have any questions or require additional information, please contact me or Emeka Anazodo at (713) 316-1800.

Sincerely,
Integrated Geosciences Laboratories, LLC.

TEST PROGRAM - 20191122

FLUID ID	Date	Time	Fluid Type	Particle Size: Microsize	Comments
Date Received: 20191122				Method: ASTM D4464	
B1BMP009_20191120 (440-255230-1)	11/20/19	1210	G. Water	X	1L Plastic Bottle
B1BMP0010_20191120 (440-255230-2)	11/20/19	1215	G. Water	X	1L Plastic Bottle
B1BMP0011_20191120 (440-255230-3)	11/20/19	1220	G. Water	X	1L Plastic Bottle
ILBMP009_20191120 (440-255230-4)	11/20/19	1140	G. Water	X	1L Plastic Bottle
ILBMP0010_20191120 (440-255230-5)	11/20/19	1150	G. Water	X	1L Plastic Bottle
TOTALS:				5	

Laboratory Test Program Notes
Standard TAT for basic analysis is 10-15 business days.
Water samples to be disposed 15 days after completion of analyses.

Note: Since laboratory accreditations are subject to change, TestAmerica Laboratories, Inc. places the ownership of method, analyte & accreditation compliance upon-out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/test/matrix being analyzed, the samples must be shipped back to the TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to TestAmerica Laboratories, Inc. attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to TestAmerica Laboratories, Inc.

List Number: 1

Creator: Bonta, Lucia F

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Refer to Job Narrative for details.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Patel, Urvashi

From: Baluran, Dwayne <DBaluran@haleyaldrich.com>
Sent: Wednesday, December 04, 2019 9:10 AM
To: Patel, Urvashi
Subject: Sample Receipt Update: 440-255230

Categories: Red Category

-External Email-

Good Morning Urvashi,

The work order was reviewed from a couple weeks ago. Please review my comments, thanks.

Sample Delivery Group	Sample Date	Work Order or COC Corrections?
440-255230-1	11/20/2019	~On work order update H&A project number from -003 to -004. ~ILBMP0009 does not need Turbidity tested. I understand the analysis has probably already been done.

Dwayne Baluran, EIT, QSP
Staff Engineer

Job Narrative 440-255714-1

Comments

No additional comments.

Receipt

The samples were received on 11/27/2019 3:55 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 4 coolers at receipt time were 2.2° C, 4.6° C, 4.8° C and 5.7° C.

Receipt Exceptions

The container label for the following samples did not match the information listed on the Chain-of-Custody (COC): B1BMP0009_20191127 (440-255714-1), B1BMP0011_20191127 (440-255714-3), ILBMP0005_20191127 (440-255714-5), EB_20191127 (440-255714-6), LPBMP0002_20191127 (440-255714-8) and LPBMP0003_20191127 (440-255714-9). For the following samples the times don't match with the COC:

Times listed on the containers for : sample # 1-0930

- sample # 3-0920
- sample # 5-0950
- sample # 6-1230
- sample # 8-0930
- sample # 9-0910

The following sample was collected in an improper container: FB-20191127 (440-255714-11). Received improper container for Particle Size Distribution.

The Field Sampler was not listed on the Chain of Custody.

Dioxin

Method 1613B: EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV). The 13C-1,2,3,4-TCDD and 13C-1,2,3,7,8,9-HxCDD associated with the following samples run on instrument 3D5 exceeded this criteria: B1BMP0009_20191127 (440-255714-1), B1BMP0010_20191127 (440-255714-2), B1BMP0011_20191127 (440-255714-3), ILBMP0004_20191127 (440-255714-4), ILBMP0005_20191127 (440-255714-5), (CCV 320-343844/2), (LCS 320-343025/2-A) and (MB 320-343025/1-A). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

Method 1613B: EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV). The 13C-1,2,3,4-TCDD and 13C-1,2,3,7,8,9-HxCDD associated with the following samples run on instrument 3D5 exceeded this criteria: ILBMP0008_20191127 (440-255714-7), LPBMP0002_20191127 (440-255714-8), LPBMP0003_20191127 (440-255714-9), LPBMP0004_20191127 (440-255714-10) and (CCV 320-343845/14). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

Method 1613B: The method blank for preparation batch 320-343025 and analytical batch 320-343844 contained OCDD above the reporting limit (RL). Associated sample(s) were not re-extracted and/or re-analyzed because results were greater than 10X the value found in the method blank.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Case Narrative

Qualifiers

Dioxin

Qualifier	Qualifier Description
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL
MB	Analyte present in the method blank
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.

Metals

Qualifier	Qualifier Description
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Project Number: 44009815
Site Location:

Subject: Final Report: Laser Particle Size Analysis – (ASTM D4464)

Dear Patel, Urvashi

Please find enclosed report for Physical Properties analyses conducted upon **nine (9)** fluid samples received from your “**Boeing SSFL ISRA and BMP**” project. All analyses were performed by applicable ASTM, EPA, or API methodologies. The samples are currently in storage and will be retained for fifteen days past the completion of testing at no charge. Please note that the samples will be disposed of at that time. You may contact me regarding storage, disposal, or return of the samples.

Integrated Geosciences Laboratories appreciate the opportunity to be of service. If you have any questions or require additional information, please contact me or Emeka Anazodo at (713) 316-1800.

Sincerely,
Integrated Geosciences Laboratories, LLC.

TOTALS:				9	

Laboratory Test Program Notes

Standard TAT for basic analysis is 10-15 business days.

Water samples to be disposed 15 days after completion of analyses.

PARTICLE SIZE SUMMARY

Note: Since laboratory accreditations are subject to change, TestAmerica Laboratories, Inc. places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to TestAmerica Laboratories, Inc. attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to TestAmerica Laboratories, Inc.

CAUTION: External Email

Hi Dwayne

We can make the corrections in our login but cannot make corrections on the COC. I can use the email below and attach that to the job as instructions from you for the logins.

We analyzed the Turbidity past hold. If you do not need it, we can leave it out of the report but will charge for the analysis.

We sent the containers to PTS labs (now know as IGL) for the FB and will check to see if Irvine analyzed the TSS for the FB as well. If they didn't start it, I will cancel and no charge. If analysis has been completed, we do charge for the analysis. I'll contact all the labs now and let you know.

Subject: Sample Receipt Updates: 440-255714 and 440-255939

-External Email-

Hello Urvashi,

Thanks for catching the COC/ label time discrepancy for the samples sent in on 11/27/2019. Using the time as listed on the COC was correct.

I just reviewed the work orders. Could you please make the following adjustments?

Sample Delivery Group	Sample Date	Work Order or COC Corrections?
440-255714-1	11/27/2019	remove equipment blank and field blank. They do not need to be tested
440-255939-1	12/28/2019	~update H&A project number to "129095-004, SID 5.2" on both COC and work order ~the COC was wrong. Revise that ILBMP0009_20191128 does not need to be tested for Turbidity

Thank you!

Dwayne Baluran, EIT, QSP

Case Narrative

Client: Haley & Aldrich, Inc.
Project/Site: BMP Performance OF 009 Watershed

Job ID: 440-255939-1
SDG: BMP Performance OF 009 Watershed

Job ID: 440-255939-1

Laboratory: Eurofins TestAmerica, Irvine

Narrative

Job Narrative 440-255939-1

Comments

Turbidity analysis cancelled by client.

Receipt

The samples were received on 11/30/2019 10:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 1.5° C.

Receipt Exceptions

The following sample was received outside of holding time: ILBMP0009_20191128 (440-255939-1). Received sample outside the holding time for Turbidity.

The Field Sampler was not listed on the Chain of Custody.

Metals

Method 200.8: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 440-583231 and analytical batch 440-583332 were outside control limits for Copper. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method FILTRATION: The following samples requested dissolved metals and were not filtered in the field: ILBMP0009_20191128 (440-255939-1) and ILBMP0010_20191128 (440-255939-2). These samples were filtered and preserved upon receipt to the laboratory.

11/30/19

2.5 mL of HNO3

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

Methods 180.1, SM 2130B: The following sample was received outside of holding time: ILBMP0009_20191128 (440-255939-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Subcontract non-Sister

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Subcontract Work

Method Particle Size: This method was subcontracted to Integrated Geosciences Laboratories LLC. The subcontract laboratory certification is different from that of the facility issuing the final report.

Qualifiers

Metals

Qualifier	Qualifier Description
LN	MS and/or MSD below acceptance limits. See Blank Spike (LCS)

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Re: PTS/IGL File No: **49167**
Project Name: Boeing SSFL ISRA and BMP.
Project Number: 44009815
Site Location:

Subject: Final Report: Laser Particle Size Analysis – (ASTM D4464)

Dear Patel, Urvashi

Please find enclosed report for Physical Properties analyses conducted upon **two (2)** fluid samples received from your “**Boeing SSFL ISRA and BMP**” project. All analyses were performed by applicable ASTM, EPA, or API methodologies. The samples are currently in storage and will be retained for fifteen days past the completion of testing at no charge. Please note that the samples will be disposed of at that time. You may contact me regarding storage, disposal, or return of the samples.

Integrated Geosciences Laboratories appreciate the opportunity to be of service. If you have any questions or require additional information, please contact me or Emeka Anazodo at (713) 316-1800.

Sincerely,
Integrated Geosciences Laboratories, LLC.

Subject: RE: Sample Receipt Updates: 440-255714 and 440-255939

CAUTION: External Email

Hi Dwayne

We can make the corrections in our login but cannot make corrections on the COC. I can use the email below and attach that to the job as instructions from you for the logins.

We analyzed the Turbidity past hold. If you do not need it, we can leave it out of the report but will charge for the analysis.

We sent the containers to PTS labs (now know as IGL) for the FB and will check to see if Irvine analyzed the TSS for the FB as well. If they didn't start it, I will cancel and no charge. If analysis has been completed, we do charge for the analysis. I'll contact all the labs now and let you know.

Urvashi

Subject: Sample Receipt Updates: 440-255714 and 440-255939

-External Email-

Hello Urvashi,

Thanks for catching the COC/ label time discrepancy for the samples sent in on 11/27/2019. Using the time as listed on the COC was correct.

I just reviewed the work orders. Could you please make the following adjustments?

Sample Delivery Group	Sample Date	Work Order or COC Corrections?
440-255714-1	11/27/2019	remove equipment blank and field blank. They do not need to be tested
440-255939-1	12/28/2019	~update H&A project number to "129095-004, SID 5.2" on both COC and work order ~the COC was wrong. Revise that ILBMP0009_20191128 does not need to be tested for Turbidity

Thank you!

Case Narrative

Client: Haley & Aldrich, Inc.
Project/Site: 12095-003 SID 5.2

Job ID: 440-255939-2
SDG: BMP Performance OF 009 Watershed

Job ID: 440-255939-2

Laboratory: Eurofins TestAmerica, Irvine

Narrative

Job Narrative 440-255939-2

Comments

No additional comments.

Receipt

The samples were received on 11/30/2019 10:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 1.5° C.

Receipt Exceptions

The following sample was received outside of holding time: ILBMP0009_20191128 (440-255939-1). Received sample outside the holding time for Turbidity.

The Field Sampler was not listed on the Chain of Custody.

Dioxin

Method 1613B: EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV). The 13C-1,2,3,4-TCDD and 13C-1,2,3,7,8,9-HxCDD associated with the following samples run on instrument 3D5 exceeded this criteria: ILBMP0009_20191128 (440-255939-1), ILBMP0010_20191128 (440-255939-2), (CCV 320-343844/2), (LCS 320-343025/2-A) and (MB 320-343025/1-A). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

Method 1613B: The method blank for preparation batch 320-343025 and analytical batch 320-343844 contained OCDD above the reporting limit (RL). Associated sample(s) were not re-extracted and/or re-analyzed because results were greater than 10X the value found in the method blank.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Dioxin Prep

Method 1613B: Elevated reporting limits are provided for the following samples due to insufficient sample provided for 1613B_Sox_Sep_P / 1613B preparation/analysis: Samples ILBMP0009_20191128 (440-255939-1) and ILBMP0010_20191128 (440-255939-2) were received in wide-mouth amber glass bottles.

preparation batch 320-343025
Method: 1613B_Sox_Sep_P / 1613B
Matrix: Aqueous

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

Dioxin

Qualifier	Qualifier Description
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL
MB	Analyte present in the method blank
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	False	Refer to Job Narrative for details.
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	False	Turbidity
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

Login Sample Receipt Checklist

Client: Haley & Aldrich, Inc.

Job Number: 440-255939-2

SDG Number: BMP Performance OF 009 Watershed

Login Number: 255939

List Source: Eurofins TestAmerica, Sacramento

List Number: 2

List Creation: 12/03/19 11:40 AM

Creator: Thompson, Sarah W

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	Seal present with no number.
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	-0.1C corr 0.4C
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	N/A	Received project as a subcontract.
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

Isotope Dilution Summary

Client: Haley & Aldrich, Inc.

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments

No additional comments.

Receipt

The samples were received on 12/5/2019 4:37 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 5 coolers at receipt time were 1.0° C, 1.8° C, 2.1° C, 2.5° C and 2.8° C.

Metals

Method FILTRATION: The following samples requested dissolved metals and were not filtered in the field: A1BMP0002_20191204 (440-256482-1), A1BMP0003_20191204 (440-256482-2) and ILBMP0002_20191204 (440-256482-3). These samples were filtered and preserved upon receipt to the laboratory.

2.5 mL of Nitric Acid
Lot:0000234822
12/9/19

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Subcontract non-Sister

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

Metals

Qualifier	Qualifier Description
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Re: PTS/IGL File No: **49172**
Project Name: Boeing SSFL ISRA and BMP.
Project Number: 44009815
Site Location:

Subject: Final Report: Laser Particle Size Analysis – (ASTM D4464)

Dear Patel, Urvashi

Please find enclosed report for Physical Properties analyses conducted upon **three (3)** fluid samples received from your “**Boeing SSFL ISRA and BMP**” project. All analyses were performed by applicable ASTM, EPA, or API methodologies. The samples are currently in storage and will be retained for fifteen days past the completion of testing at no charge. Please note that the samples will be disposed of at that time. You may contact me regarding storage, disposal, or return of the samples.

Integrated Geosciences Laboratories appreciate the opportunity to be of service. If you have any questions or require additional information, please contact me or Emeka Anazodo at (713) 316-1800.

Sincerely,
Integrated Geosciences Laboratories, LLC.

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Subject: Sample Receipt update: 440-256482-1

-External Email-

Good Morning Urvashi,

The work order for the recent BMP sampling had been reviewed and the following (minor) comments are below. I don't think I've sent this one to you yet.

Sample Delivery Group	Sample Date	Work Order or COC Corrections?
440-256482-1	12/4/2019	~on work order update sample 2 name from "1LBMP0002_20191204" "1LBMP" (first part is the letter "l" not the number 1) ~update H&A purchase # to "129095-004"

Thanks,
Dwayne Baluran, EIT, QSP
Staff Engineer

Comments

No additional comments.

Receipt

The samples were received on 12/5/2019 4:37 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 5 coolers at receipt time were 1.0° C, 1.8° C, 2.1° C, 2.5° C and 2.8° C.

Dioxin

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Dioxin Prep

Method 1613B: Elevated reporting limits are provided for the following samples due to insufficient sample provided for 1613B_Sox_Sep_P / 1613B preparation/analysis: Samples A1BMP0002_20191204 (440-256482-1), A1BMP0003_20191204 (440-256482-2) and ILBMP0002_20191204 (440-256482-3) were received in wide-mouth amber glass bottles.

preparation batch 320-345993

Method: 1613B_Sox_Sep_P / 1613B

Matrix: Aqueous

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Method Summary

Client: Haley & Aldrich, Inc.
Project/Site: Boeing SSFL ISRA and BMP

Job ID: 440-256482-2

Method	Method Description	Protocol	Laboratory
1613B	Dioxins and Furans (HRGC/HRMS)	40CFR136A	TAL SAC
1613B	Separatory Funnel (L/L) Extraction with Soxhlet Extraction of Dioxin and Furans	40CFR136A	TAL SAC

Protocol References:

40CFR136A = "Methods for Organic Chemical Analysis of Municipal Industrial Wastewater", 40CFR, Part 136, Appendix A, October 26, 1984 and subsequent revisions.

Definitions/Glossary

Client: Haley & Aldrich, Inc.
Project/Site: Boeing SSFL ISRA and BMP

Job ID: 440-256482-2

Qualifiers

Dioxin

Qualifier	Qualifier Description
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL
MB	Analyte present in the method blank
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	Seal present with no number.
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	Ob:1.3c Corr:1.7c
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	False	Received project as a subcontract.
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Comments

No additional comments.

Receipt

The samples were received on 12/23/2019 4:05 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 1.7° C and 2.3° C.

HPLC/IC

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Dioxin

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals

Method FILTRATION: The following samples requested dissolved metals and were not filtered in the field: LPBMP0002_20191223 (440-258024-1), LPBMP0003_20191223 (440-258024-2), LPBMP0004_20191223 (440-258024-3) and EPSW002IE02_20191223 (440-258024-4). These samples were filtered and preserved upon receipt to the laboratory.

Method 200.8: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 440-587802 and analytical batch 440-588003 were outside control limits for Iron. Sample matrix interference and/or non-homogeneity are suspected. The associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

Method D4464: The sample duplicate precision for the following sample associated with analytical batch 570-42967 was outside control limits: LPBMP0003_20191223 (440-258024-2) and (440-258024-D-2 DU). The associated Laboratory Control Sample / Laboratory Control Sample Duplicate (LCS/LCSD) precision met acceptance criteria.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Dioxin Prep

Method 1613B: Elevated reporting limits are provided for the following samples due to insufficient sample provided for 1613B_Sox_Sep_P preparation/analysis: Sample LPBMP0002_20191223 (440-258024-1), LPBMP0004_20191223 (440-258024-3) and EPSW002IE02_20191223 (440-258024-4) was received in a wide-mouth amber glass bottle.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PARTICLE SIZE SUMMARY

(ASTM D422 / D4464M)

Haley & Aldrich, Inc.

Date Sampled: 12/23/19
 Date Received: 12/23/19
 Work Order No: 440-258024
 Date Analyzed: 01/06/20
 Method: ASTM D4464M

Project:

Sample ID	Depth ft	Description	Mean Grain Size mm
LPBMP0004_20191223		Silt	0.047

Particle Size Distribution, wt by percent								Total Silt & Clay
Total Gravel	Very Coarse Sand	Coarse Sand	Medium Sand	Fine Sand	Very Fine Sand	Silt	Clay	
0.00	0.00	0.00	0.00	0.44	34.03	61.84	3.69	65.53

V 3.0

Method Summary

Client: Haley & Aldrich, Inc.

Job ID: 440-258024-1

Project/Site: BMP Performance OF 001, 002, and/or 009

Method	Method Description	Protocol	Laboratory
300.0	Anions, Ion Chromatography	MCAWW	TAL IRV
1613B	Dioxins and Furans (HRGC/HRMS)	40CFR136A	TAL SAC
200.8	Metals (ICP/MS)	EPA	TAL IRV
245.1	Mercury (CVAA)	EPA	TAL IRV
SM 2540D	Solids, Total Suspended (TSS)	SM	TAL IRV
D4464	Particle Size Distribution of Catalytic Material (Laser light scattering)	ASTM	ECL 1
1613B	Separatory Funnel (L/L) Extraction with Soxhlet Extraction of Dioxin and Furans	40CFR136A	TAL SAC
200.2	Preparation, Total Recoverable Metals	EPA	TAL IRV
245.1	Preparation, Mercury	EPA	TAL IRV
FILTRATION	Sample Filtration	None	TAL IRV

Job ID: 440-258024-1

Qualifiers

Dioxin

Qualifier	Qualifier Description
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL
MB	Analyte present in the method blank
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.

Metals

Qualifier	Qualifier Description
BB	Sample > 4X spike concentration
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL
LM	MS and/or MSD above acceptance limits. See Blank Spike (LCS)

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/leak/matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins TestAmerica.

ANALYTICAL REPORT

Eurofins Calscience Irvine
17461 Derian Ave
Suite 100
Irvine, CA 92614-5817
Tel: (949)261-1022

Laboratory Job ID: 440-258024-2

Client Project/Site: BMP Performance OF 001, 002, and/or 900

For:

Haley & Aldrich, Inc.
400 E Van Buren St.
Suite 545
Phoenix, Arizona 85004

Attn: Katherine Miller

Authorized for release by:
1/28/2020 9:32:26 AM

Christian Bondoc, Project Manager I
(949)260-3218
christian.bondoc@testamericainc.com

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments

No additional comments.

Receipt

The samples were received on 12/23/2019 4:05 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 1.7° C and 2.3° C.

Receipt Exceptions

The reference method requires samples to be preserved to a pH of <2. The following sample was received with insufficient preservation at a pH of 7. The sample was preserved to the appropriate pH in the laboratory, by adding approx. 24mL of HNO3 to each 2.5Gal cubicontainer. For a final pH of <2.

Requested Method: RAD

pH strip: HC902937

HNO3 lot: 1848535

RAD

Method 900.0: Gross Alpha Beta Prep Batch 160-455777

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative.

Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

EPSW002IE02_20191223 (440-258024-4), (LCS 160-455777/2-A), (LCSB 160-455777/3-A), (MB 160-455777/1-A), (440-258077-J-1-F), (440-258077-J-1-G MS), (440-258077-J-1-I MSBT), (440-258077-J-1-J MSBTD) and (440-258077-J-1-H MSD)

Method 900.0: Gross Alpha-Beta Prep Batch 160-457240

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative.

Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

EPSW002IE02_20191223 (440-258024-4), (LCS 160-457240/2-A), (LCSB 160-457240/3-A) and (MB 160-457240/1-A)

Method Evaporation: Gross Alpha/Beta preparation batch 160-455663 and 160-455777

To reach target mass and efficiency additional volume was added to the following samples:EPSW002IE02_20191223 (440-258024-4). The total sample volume is reflected in the initial amount field.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

Rad

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.
G	The Sample MDC is greater than the requested RL.
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

ANALYTICAL REPORT

Eurofins Calscience Irvine
17461 Derian Ave
Suite 100
Irvine, CA 92614-5817
Tel: (949)261-1022

Laboratory Job ID: 440-258216-1

Client Project/Site: BMP Performance OF 001, 002, and/or 009

For:

Haley & Aldrich, Inc.
400 E Van Buren St.
Suite 545
Phoenix, Arizona 85004

Attn: Katherine Miller

Authorized for release by:
1/20/2020 9:35:30 AM

Christian Bondoc, Project Manager I
(949)260-3218
christian.bondoc@testamericainc.com

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Narrative

Job Narrative 440-258216-1

Comments

No additional comments.

Receipt

The samples were received on 12/27/2019 11:20 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 1.0° C, 1.2° C and 1.3° C.

HPLC/IC

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Dioxin

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals

Method FILTRATION: The following samples requested dissolved metals and were not filtered in the field: A1BMP0002_20191226 (440-258216-1), A1BMP0003_20191226 (440-258216-2), LXBMP0011_20191226 (440-258216-3), LXBMP0012_20191226 (440-258216-4), EPSW001IE01_20191226 (440-258216-5) and EPSW002BG01_20191226 (440-258216-6). These samples were filtered and preserved upon receipt to the laboratory.

12/28/19

150mL of sample filtered
2.5mL of HNO₃
LOt: 0000234822

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

Method SM 2540D: Insufficient sample volume was provided to produce results within the specifications of SM 2540D which requires at least 2.5 mg dried residue with a sample volume not to exceed 1L. A sample volume less than 1L, that yielded less than 2.5 mg dried residue, was provided for the following samples: 440-258216-1, 440-258216-2, 440-258216-4, 440-258216-5, 440-258216-6.

Method D4464: The sample duplicate precision for the following sample associated with analytical batch 570-42967 was outside control limits: (440-258024-D-2) and (440-258024-D-2 DU). The associated Laboratory Control Sample / Laboratory Control Sample Duplicate (LCS/LCSD) precision met acceptance criteria.

Method D4464: Insufficient sample provided for particle size analysis: A1BMP0002_20191226 (440-258216-1) and LXBMP0012_20191226 (440-258216-4).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Dioxin Prep

Method 1613B: Elevated reporting limits are provided for the following samples due to insufficient sample provided for 1613B_Sox_Sep_P preparation/analysis: Sample A1BMP0002_20191226 (440-258216-1), A1BMP0003_20191226 (440-258216-2), LXBMP0011_20191226 (440-258216-3), LXBMP0012_20191226 (440-258216-4), EPSW001IE01_20191226 (440-258216-5) and EPSW002BG01_20191226 (440-258216-6) was received in a narrow-mouth amber glass bottle.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Method Summary

Client: Haley & Aldrich, Inc.

Job ID: 440-258216-1

Project/Site: BMP Performance OF 001, 002, and/or 009

Method	Method Description	Protocol	Laboratory
300.0	Anions, Ion Chromatography	MCAWW	TAL IRV
1613B	Dioxins and Furans (HRGC/HRMS)	40CFR136A	TAL SAC
200.8	Metals (ICP/MS)	EPA	TAL IRV
245.1	Mercury (CVAA)	EPA	TAL IRV
SM 2540D	Solids, Total Suspended (TSS)	SM	TAL IRV
D4464	Particle Size Distribution of Catalytic Material (Laser light scattering)	ASTM	ECL 1
1613B	Separatory Funnel (L/L) Extraction with Soxhlet Extraction of Dioxin and Furans	40CFR136A	TAL SAC
200.2	Preparation, Total Recoverable Metals	EPA	TAL IRV
245.1	Preparation, Mercury	EPA	TAL IRV
FILTRATION	Sample Filtration	None	TAL IRV

Client: Haley & Aldrich, Inc.
Project/Site: BMP Performance OF 001, 002, and/or 009

Job ID: 440-258216-1

Qualifiers

Dioxin

Qualifier	Qualifier Description
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL
MB	Analyte present in the method blank
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.

Metals

Qualifier	Qualifier Description
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL

General Chemistry

Qualifier	Qualifier Description
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/test/matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins TestAmerica.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

-External Email-

Hi Mark,

After reviewing the sample receipts for recent events (BMP sampling, OF001 comp, OF008 comp) I have the following comments:

Sampling Event	Sample Delivery Group	Samples Included	Work Order or COC Corrections?
ISRA/BMP	440-258216-1	A1BMP0002_20191226, A1BMP0003_20191226, LXBMP0011_20191226, LXBMP0012_20191226, EPSW0011E01_20191226, EPSW002BG01_20191226	COC - incorrect sample ID names. All should be readjusted to "20191226" (the date the samples were collected) in the work order. Incorrect project number. Please update Work Order to "129095-004 5.1" I assume the Gross Alpha Total and Dissolved for the last two sample IDs are in a separate SDG (440-258216-2) that will be sent to us at a later date?
OF001 -Qtrly	440-258219-1	Outfall001_20191227_Comp, Outfall001_20191227_Comp_F	Work Order - per the comments, only test for Fe at OF001. Please remove Al, As, and Mn from both Total and Dissolved Metals.

CAUTION: External Email

Hello,

Attached please find the sample confirmation files for job 440-258216-1; BMP Performance OF 001, 002, and/or 009.

Please verify sample IDs. COC SAMPLE #_2019121226, looks like it is doubled up on the 12s. Logged in per COC.

Sample #1 A1BMP002_2019121226 (440-258216-1) has a "1" instead of an "X" under the 1613 Dioxons. Sample was logged in for the dioxins, please confirm.

Please feel free to contact me or your PM Urvashi Patel if you have any questions.

Thank you.

Mark B Christine

Job ID: 440-258216-2

Laboratory: Eurofins Calscience Irvine

Narrative

Job Narrative 440-258216-2

Comments

No additional comments.

Receipt

The samples were received on 12/27/2019 11:20 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 1.0° C, 1.2° C and 1.3° C.

RAD

Method 900.0: Gross Alpha Beta Prep Batch 160-455777

The detection goal was not met for the following sample due to a reduction of the sample size attributed to high residual mass: EPSW002BG01_20191226 (440-258216-6). Analytical results are reported with the detection limit achieved.

Method 900.0: Gross Alpha Beta Prep Batch 160-455777

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative.

Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

EPSW001IE01_20191226 (440-258216-5), EPSW002BG01_20191226 (440-258216-6), (LCS 160-455777/2-A), (LCSB 160-455777/3-A), (MB 160-455777/1-A), (440-258077-J-1-F), (440-258077-J-1-G MS), (440-258077-J-1-I MSBT), (440-258077-J-1-J MSBTD) and (440-258077-J-1-H MSD)

Method 900.0: Gross Alpha-Beta Prep Batch 160-457240

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative.

Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

EPSW001IE01_20191226 (440-258216-5), (LCS 160-457240/2-A), (LCSB 160-457240/3-A) and (MB 160-457240/1-A)

Method Evaporation: Gross Alpha/Beta preparation batch 160-455663 and 160-455777

To reach target mass and efficiency additional volume was added to the following samples:EPSW002BG01_20191226 (440-258216-6). The total sample volume is reflected in the initial amount field.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

Rad

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.
G	The Sample MDC is greater than the requested RL.
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

-External Email-

Hi Mark,

After reviewing the sample receipts for recent events (BMP sampling, OF001 comp, OF008 comp) I have the following comments:

Sampling Event	Sample Delivery Group	Samples Included	Work Order or COC Corrections?
ISRA/BMP	440-258216-1	A1BMP0002_20191226, A1BMP0003_20191226, LXBMP0011_20191226, LXBMP0012_20191226, EPSW0011E01_20191226, EPSW002BG01_20191226	COC - incorrect sample ID names. All should be readjusted to "20191226" (the date the samples were collected) in the work order. Incorrect project number. Please update Work Order to "129095-004 5.1" I assume the Gross Alpha Total and Dissolved for the last two sample IDs are in a separate SDG (440-258216-2) that will be sent to us at a later date?
OF001 -Qtrly	440-258219-1	Outfall001_20191227_Comp, Outfall001_20191227_Comp_F	Work Order - per the comments, only test for Fe at OF001. Please remove Al, As, and Mn from both Total and Dissolved Metals.

Subject: Eurofins TestAmerica sample confirmation files from 440-258216-1 BMP Performance OF 001, 002, and/or 009

CAUTION: External Email

Hello,

Attached please find the sample confirmation files for job 440-258216-1; BMP Performance OF 001, 002, and/or 009.

Please verify sample IDs. COC SAMPLE #_2019121226, looks like it is doubled up on the 12s. Logged in per COC.

Sample #1 A1BMP002_2019121226 (440-258216-1) has a "1" instead of an "X" under the 1613 Dioxons. Sample was logged in for the dioxins, please confirm.

Please feel free to contact me or your PM Urvashi Patel if you have any questions.

Thank you.

Mark B Christine

Comments

No additional comments.

Receipt

The samples were received on 3/11/2020 4:45 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 1.9° C and 4.6° C.

Dioxin

Method 1613B: EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV). The 13C-1,2,3,4-TCDD associated with the following samples run on instrument DFS 1 exceeded this criteria: ILBMP0004_20200310 (440-262590-1), ILBMP0005_20200310 (440-262590-2), ILBMP0008_20200310 (440-262590-3), (CCV 320-366401/17), (LCS 320-365527/2-A) and (MB 320-365527/1-A). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method FILTRATION: The following samples requested dissolved metals and were not filtered in the field: ILBMP0004_20200310 (440-262590-1), ILBMP0005_20200310 (440-262590-2) and ILBMP0008_20200310 (440-262590-3). These samples were filtered and preserved upon receipt to the laboratory.

03/11/20
2.5mL of HNO3
HNO3 Bottle Lot # 0000234822

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

Method D4464: The sample duplicate precision for the following sample associated with analytical batch 570-57158 was outside control limits: ILBMP0008_20200310 (440-262590-3) and (440-262590-E-3 DU). The associated Laboratory Control Sample / Laboratory Control Sample Duplicate (LCS/LCSD) precision met acceptance criteria.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Dioxin Prep

Method 1613B: Elevated reporting limits are provided for the following samples due to insufficient sample provided for 1613B_Sox_Sep_P preparation/analysis: Samples ILBMP0004_20200310 (440-262590-1), ILBMP0005_20200310 (440-262590-2) and ILBMP0008_20200310 (440-262590-3) were received in wide-mouth amber glass bottles.

preparation batch 320-365527
Method: 1613B_Sox_Sep_P / 1613B
Matrix: Aqueous

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Job ID: 440-262590-1

Qualifiers

Dioxin

Qualifier	Qualifier Description
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL
MB	Analyte present in the method blank
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.

Metals

Qualifier	Qualifier Description
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Laboratory: Eurofins Calscience Irvine

Narrative

Job Narrative 440-262973-1

Comments

No additional comments.

Receipt

The samples were received on 3/13/2020 5:25 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 4 coolers at receipt time were 4.5° C, 4.7° C, 5.3° C and 5.4° C.

Receipt Exceptions

For samples #1, 2, and 3: The COC listed 6 containers however 7 containers were received for each. ILBMP0002_20200312 (440-262973-1), LXBMP0011_20200313 (440-262973-2) and LXBMP0012_20200313 (440-262973-3)

HPLC/IC

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Dioxin

Method 1613B: EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV). The 13C-1,2,3,4-TCDD associated with the following samples run on instrument DFS 1 exceeded this criteria: ILBMP0002_20200312 (440-262973-1), LXBMP0011_20200313 (440-262973-2), LXBMP0012_20200313 (440-262973-3), EPSW001BG01_20200313 (440-262973-4), EPSW001IE01_20200313 (440-262973-5), EPSW002IE02_20200313 (440-262973-6), (CCV 320-366401/17), (CCV 320-366402/31), (LCS 320-365527/2-A) and (MB 320-365527/1-A). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method FILTRATION: The following samples requested dissolved metals and were not filtered in the field: ILBMP0002_20200312 (440-262973-1), LXBMP0011_20200313 (440-262973-2), LXBMP0012_20200313 (440-262973-3), EPSW001BG01_20200313 (440-262973-4), EPSW001IE01_20200313 (440-262973-5) and EPSW002IE02_20200313 (440-262973-6). These samples were filtered and preserved upon receipt to the laboratory.

03/16/20

2.5mL of HNO3

HNO3 Lot # 0000234822

Method 245.1: The initial calibration verification (ICV) result for batch 440-602330 was above the upper control limit. Sample results were non-detects, and have been reported as qualified data.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Dioxin Prep

Method 1613B: Elevated reporting limits are provided for the following samples due to insufficient sample provided for 1613B_Sox_Sep_P preparation/analysis: Samples ILBMP0002_20200312 (440-262973-1), LXBMP0011_20200313 (440-262973-2), LXBMP0012_20200313 (440-262973-3), EPSW001BG01_20200313 (440-262973-4), EPSW001IE01_20200313 (440-262973-5) and EPSW002IE02_20200313 (440-262973-6) were received in wide-mouth amber glass bottles.

Definitions/Glossary

Client: Haley & Aldrich, Inc.
Project/Site: Boeing SSFL ISRA and BMP

Job ID: 440-262973-1

Qualifiers

Dioxin

Qualifier	Qualifier Description
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL
MB	Analyte present in the method blank
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.

Metals

Qualifier	Qualifier Description
BB	Sample > 4X spike concentration
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

Client: Haley & Aldrich, Inc.
Project/Site: Boeing SSFL ISRA and BMP

Job ID: 440-262973-1

Laboratory: Eurofins Calscience Irvine

The accreditations/certifications listed below are applicable to this report.

Authority	Program	Identification Number	Expiration Date
California	State	2706	06-30-20

Laboratory: Eurofins Calscience LLC

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Note: Since laboratory accreditations are subject to change, Eurofins Calscience places the ownership of method, analysis & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/test/matrix being analyzed, the samples must be shipped back to the Eurofins Calscience laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Calscience attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Calscience.

Christian Bondoc, Project Manager I
(949)260-3218
christian.bondoc@testamericainc.com

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments

No additional comments.

Receipt

The samples were received on 3/13/2020 5:25 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 4 coolers at receipt time were 4.5° C, 4.7° C, 5.3° C and 5.4° C.

RAD

Method 900.0: Gross Alpha/Beta Prep Batch 160-465288

The gross alpha detection goal was not met for the following samples due to a reduction of the sample size attributed to high residual mass. Analytical results are reported with the MDC achieved.
(440-263045-Q-1-E) and (440-263045-Q-1-J DU).

Method 900.0: Gross Alpha/Beta Prep Batch 160-465288

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative.

Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

EPSW001BG01_20200313 (440-262973-4), EPSW001IE01_20200313 (440-262973-5), EPSW002IE02_20200313 (440-262973-6), (LCS 160-465288/2-A), (LCSB 160-465288/3-A), (MB 160-465288/1-A), (440-263045-Q-1-E), (440-263045-Q-1-J DU), (440-263045-Q-1-F MS), (440-263045-Q-1-H MSBT), (440-263045-Q-1-I MSBTD) and (440-263045-Q-1-G MSD)

Method 900.0: Gross Alpha Beta Prep Batch 160-465556

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative.

Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

EPSW001BG01_20200313 (440-262973-4), EPSW001IE01_20200313 (440-262973-5), EPSW002IE02_20200313 (440-262973-6), (LCS 160-465556/2-A), (LCSB 160-465556/3-A), (MB 160-465556/1-A), (680-181935-A-5-A), (680-181935-A-5-D DU), (680-181935-A-5-B MS) and (680-181935-A-5-C MSBT)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

Rad

Qualifier	Qualifier Description
G	The Sample MDC is greater than the requested RL.
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

Client: Haley & Aldrich, Inc.
 Project/Site: Boeing SSFL ISRA and BMP

Job ID: 440-262973-2

Laboratory: Eurofins Calscience Irvine

The accreditations/certifications listed below are applicable to this report.

Authority	Program	Identification Number	Expiration Date
California	State	2706	06-30-20

Laboratory: Eurofins TestAmerica, St. Louis

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Comments

No additional comments.

Receipt

The samples were received on 4/7/2020 2:30 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 1.8° C and 2.6° C.

HPLC/IC

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Dioxin

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

RAD

Method Evaporation: Gross Alpha/Beta preparation batch 160-468136

The following samples had additional volume added to reach target mass and efficiency EPSW002IE02_20200406 (440-264190-4). The total sample volume is reflected in the initial amount field.

Method 900.0: Gross Alpha Beta Prep Batch 160-468140

The gross alpha-beta detection goals were not met for the following samples due to a reduction of the sample size attributed to high residual mass: (440-264451-B-4-A), (440-264451-B-4-D DU), (440-264451-B-4-B MS) and (440-264451-B-4-C MSBT). Analytical results are reported with the detection limit achieved.

Method 900.0: Gross Alpha Beta Prep Batch 160-468140

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative.

Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

EPSW002IE02_20200406 (440-264190-4), (LCS 160-468140/2-A), (LCSB 160-468140/3-A), (MB 160-468140/1-A), (440-264451-B-4-A), (440-264451-B-4-D DU), (440-264451-B-4-B MS) and (440-264451-B-4-C MSBT)

Method 900.0: Gross Alpha Beta Prep Batch 160-468136

The gross alpha detection goal was not met for the following samples due to a reduction of the sample size attributed to high residual mass: (440-264162-K-1-N), (440-264162-K-1-S DU), (440-264162-K-1-O MS), (440-264162-K-1-Q MSBT), (440-264162-K-1-R MSBTD) and (440-264162-K-1-P MSD). Analytical results are reported with the detection limit achieved.

Method 900.0: Gross Alpha Beta Prep Batch 160-468136

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative.

Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

EPSW002IE02_20200406 (440-264190-4), (LCS 160-468136/2-A), (LCSB 160-468136/3-A), (MB 160-468136/1-A), (440-264162-K-1-N), (440-264162-K-1-S DU), (440-264162-K-1-O MS), (440-264162-K-1-Q MSBT), (440-264162-K-1-R MSBTD) and (440-264162-K-1-P MSD)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Case Narrative

Client: Haley & Aldrich, Inc.
Project/Site: BMP Performance OF 001, 002 and/or 009

Job ID: 440-264190-1

Job ID: 440-264190-1 (Continued)

Laboratory: Eurofins Calscience Irvine (Continued)

Method FILTRATION: The following samples requested dissolved metals and were not filtered in the field: LXBMP0010_20200406 (440-264190-1), LXBMP0011_20200406 (440-264190-2), LXBMP0012_20200406 (440-264190-3) and EPSW002IE02_20200406 (440-264190-4). These samples were filtered and preserved upon receipt to the laboratory.

04/07/20
2.5mL of HNO3
HNO3 Lot # 0000234822

Method 200.8: The matrix spike / matrix spike duplicate (MS/MSD) recoveries of Thallium for preparation batch 440-604189 and analytical batch 440-604275 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected. The associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 200.8: The matrix spike duplicate (MSD) precision of Zinc for preparation batch 440-604189 and analytical batch 440-604275 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected. The associated laboratory control sample (LCS) was within acceptance limits

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

Method D4464: Insufficient amount of particles in sample for analysis.

LXBMP0011_20200406 (440-264190-2)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Dioxin Prep

Method 1613B: Elevated reporting limits are provided for the following samples due to insufficient sample provided for 1613B_Sox_Sep_P preparation/analysis: Samples LXBMP0010_20200406 (440-264190-1), LXBMP0011_20200406 (440-264190-2), LXBMP0012_20200406 (440-264190-3) and EPSW002IE02_20200406 (440-264190-4) were provided in wide-mouth amber glass bottles.

preparation batch 320-371493
Method: 1613B_Sox_Sep_P / 1613B
Matrix: Aqueous

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Method Summary

Client: Haley & Aldrich, Inc.
Project/Site: BMP Performance OF 001, 002 and/or 009

Job ID: 440-264190-1

Method	Method Description	Protocol	Laboratory
300.0	Anions, Ion Chromatography	MCAWW	TAL IRV
1613B	Dioxins and Furans (HRGC/HRMS)	EPA	TAL SAC
200.8	Metals (ICP/MS)	EPA	TAL IRV
245.1	Mercury (CVAA)	EPA	TAL IRV
SM 2540D	Solids, Total Suspended (TSS)	SM	TAL IRV
D4464	Particle Size Distribution of Catalytic Material (Laser light scattering)	ASTM	ECL 1
900.0	Gross Alpha and Gross Beta Radioactivity	EPA	TAL SL
1613B	Separatory Funnel (L/L) Extraction with Soxhlet Extraction of Dioxin and Furans	EPA	TAL SAC
200.2	Preparation, Total Recoverable Metals	EPA	TAL IRV
245.1	Preparation, Mercury	EPA	TAL IRV
Evaporation	Preparation, Evaporation	None	TAL SL
FILTRATION	Sample Filtration	None	TAL IRV
Filtration	Sample Filtration	None	TAL SL

Protocol References:

Client: Haley & Aldrich, Inc.
 Project/Site: BMP Performance OF 001, 002 and/or 009

Job ID: 440-264190-1

Qualifiers

Dioxin

Qualifier	Qualifier Description
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL
MB	Analyte present in the method blank
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.

Metals

Qualifier	Qualifier Description
BA	Relative percent difference out of control
J,DX	Estimated value; value < lowest standard (MQL), but >than MDL
LN	MS and/or MSD below acceptance limits. See Blank Spike (LCS)
MB	Analyte present in the method blank

Rad

Qualifier	Qualifier Description
G	The Sample MDC is greater than the requested RL.
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Note: Since laboratory accreditations are subject to change, Eurofins Calscience places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Calscience laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Calscience attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Calscience.

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Definitions/Glossary

Client: Jacobs Engineering Group, Inc.
Project/Site: CH661 / 692670.61.SW

Job ID: 570-14206-1

Qualifiers

Metals

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

CASE NARRATIVE

Client: Jacobs Engineering Group, Inc.

Project: CH661 / 692670.61.SW

Report Number: 570-14206-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) resulting from a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are an unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes within the calibration range of the instrument or that reduces the interferences thereby enabling the quantification of target analytes.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 11/27/2019 at 5:10 PM; the samples arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 4.9 degrees Celsius.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2 degrees Celsius of the required temperature or method specified range. For samples with a specified temperature of 4 degrees Celsius, samples with a temperature ranging from just above freezing temperature of water to 6 degrees Celsius shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

DISSOLVED METALS (ICPMS)

Samples A2BMP0012S007 (570-14206-1) and EVBMP0003S029 (570-14206-2) were analyzed for Dissolved Metals (ICPMS) in accordance with EPA Method 200.8. The samples were analyzed on 12/10/2019.

The following samples were not filtered within 15 minutes of sample collection as required by the method: A2BMP0012S007 (570-14206-1) and EVBMP0003S029 (570-14206-2). The samples were filtered prior to analysis at the laboratory, and the results have been flagged.

Lead failed the recovery criteria low for the MS of sample 570-14202-7 in batch 570-38174.

Refer to the QC report for details.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL RECOVERABLE METALS (ICPMS)

Samples A2BMP0012S007 (570-14206-1), EVBMP0003S029 (570-14206-2) and FBQW1869Q001 (570-14206-3) were analyzed for Total Recoverable Metals (ICPMS) in accordance with EPA Method 200.8. The samples were prepared on 12/08/2019 and analyzed on 12/10/2019.

The continuing calibration blank (CCB) contained analytes greater than the lowest method detection limits (MDL), and were not reanalyzed because detections were below the reporting limits (RL). The data has been reported.

Lead failed the recovery criteria low for the MS and MSD of sample 570-14380-2 in batch 570-37974.

Refer to the QC report for details.

Samples A2BMP0012S007 (570-14206-1)[5X] and EVBMP0003S029 (570-14206-2)[5X] required dilution prior to analysis due to the nature of the sample matrix. The reporting limits have been adjusted accordingly.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DISSOLVED MERCURY

Samples A2BMP0012S007 (570-14206-1) and EVBMP0003S029 (570-14206-2) were analyzed for Dissolved Mercury in accordance with EPA Method 245.1. The samples were prepared and analyzed on 12/06/2019.

The following samples were not filtered within 15 minutes of sample collection as required by the method: A2BMP0012S007 (570-14206-1) and EVBMP0003S029 (570-14206-2). The samples were filtered prior to analysis at the laboratory, and the results have been flagged.

Mercury exceeded the RPD limit for the MSD of sample 570-14202-1 in batch 570-37422.

Refer to the QC report for details.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL MERCURY

Samples A2BMP0012S007 (570-14206-1), EVBMP0003S029 (570-14206-2) and FBQW1869Q001 (570-14206-3) were analyzed for Total Mercury in accordance with EPA Method 245.1. The samples were prepared on 12/06/2019 and analyzed on 12/06/2019 and 12/09/2019.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL SUSPENDED SOLIDS

Samples A2BMP0012S007 (570-14206-1) and EVBMP0003S029 (570-14206-2) were analyzed for Total Suspended Solids in accordance with SM 2540D. The samples were analyzed on 12/04/2019.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PARTICLE SIZE

Samples A2BMP0012S007 (570-14206-1) and EVBMP0003S029 (570-14206-2) were analyzed for Particle Size in accordance with ASTM D 4464. The samples were analyzed on 12/03/2019.

The sample duplicate precision for the following sample associated with analytical batch 570-36792 was outside control limits: EVBMP0003S029 (570-14206-2) and (570-14206-D-2 DU). The associated Laboratory Control Sample / Laboratory Control Sample Duplicate (LCS/LCSD) precision met acceptance criteria.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TURBIDITY

Samples A2BMP0012S007 (570-14206-1) and FBQW1869Q001 (570-14206-3) were analyzed for Turbidity in accordance with SM 2130B. The samples were analyzed on 11/27/2019.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Detection Summary

SPEXertificate®

Certificate of Reference Material

Catalog Number: CL-CAL-2 **Lot No.** CL2-69WGY
Description: Instrument Calibration Standard 2
Matrix: 5% HNO₃ / Tr. Tart. Acid / Tr. HF

This CLARITAS PPT® Certified Reference Material, CRM, is intended primarily for use as a calibration standard or quality control standard for inorganic spectroscopic instrumentation such as ICP-OES, DCP, AA, ICP-MS, and XRF. It can be employed in USEPA, ASTM and other methods relevant to the certified properties listed below.

The CRM is prepared from high purity single element concentrates of individual elements using Class A laboratory ware to give precise concentrations. See side 2 for details of certification.

Instrumental Analysis by ICP Spectrometer:

Balances are calibrated regularly with weight sets traceable to NIST#s 32856, 32867 and others. This CRM is guaranteed stable and accurate to ±0.5% of the certified value. This includes uncertainty components due to preparation, measurement, homogeneity, and short-term and long-term stability. No measured concentration of any individual component exceeds ±2% of the labeled value. This guarantee is valid for a period of one year from the date of certification only when the material is kept tightly capped and stored under ambient laboratory conditions.

Date of Certification: AUG -- 2019

Certifying Officer: Katherine Cullinan
 Katherine Cullinan, QC Manager

Dear Mr. Patel:

Cape Fear Analytical LLC (CFA) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on December 04, 2019. This original data report has been prepared and reviewed in accordance with CFA's standard operating procedures.

Our policy is to provide high quality, personalized analytical services to enable you to meet your analytical needs on time every time. We trust that you will find everything in order and to your satisfaction. If you have any questions, please do not hesitate to call me at 910-795-0421 Ext. 2.

Sincerely,

Cynde Larkins
Project Manager

EXTERNAL EMAIL*

Good afternoon,

CFA received the samples for your Job number 570-14206-2 yesterday in good condition and within

temperature. Will you please verify the collection date for sample FBQW1869Q001? The COC has 07:15 but the label has 07:30.

Thank you,

High Resolution Dioxins and Furans Analysis

Case Narrative

**HDOX Case Narrative
Eurofins Calscience (CALs)
SDG 570-14206
Work Order 15900**

Method/Analysis Information

Product: Dioxins/Furans by EPA Method 1613B in Liquids
Analytical Method: EPA Method 1613B
Extraction Method: SW846 3520C
Analytical Batch Number: 42571
Clean Up Batch Number: 42568
Extraction Batch Number: 42567

Sample Analysis

Samples were received at 2.3°C (15900001, 15900002, 15900003). The following samples were analyzed using the analytical protocol as established in EPA Method 1613B:

Sample ID	Client ID
12025525	Method Blank (MB)
12025526	Laboratory Control Sample (LCS)
12025527	Laboratory Control Sample Duplicate (LCSD)
15900001	A2BMP00112S007
15900002	EVBMP0003S029
15900003	FBQW1869Q001

The samples in this SDG were analyzed on an "as received" basis.

SOP Reference

Procedure for preparation, analysis and reporting of analytical data are controlled by Cape Fear Analytical LLC (CFA) as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with CF-OA-E-002 REV# 15.

Raw data reports are processed and reviewed by the analyst using the TargetLynx software package.

Calibration Information

Initial Calibration

All initial calibration requirements have been met for this sample delivery group (SDG).

Continuing Calibration Verification (CCV) Requirements

All associated calibration verification standard(s) (CCV) met the acceptance criteria.

Quality Control (QC) Information

Certification Statement

The test results presented in this document are certified to meet all requirements of the 2009 TNI Standard.

Method Blank (MB) Statement

The MB(s) analyzed with this SDG met the acceptance criteria.

Surrogate Recoveries

All surrogate recoveries were within the established acceptance criteria for this SDG.

Laboratory Control Sample (LCS) Recovery

The LCS spike recoveries met the acceptance limits.

Laboratory Control Sample Duplicate (LCSD) Recovery

The LCSD spike recoveries met the acceptance limits.

LCS/LCSD Relative Percent Difference (RPD) Statement

The RPD(s) between the LCS and LCSD met the acceptance limits.

QC Sample Designation

A matrix spike and matrix spike duplicate analysis was not required for this SDG.

Technical Information

Holding Time Specifications

CFA assigns holding times based on the associated methodology, which assigns the date and time from sample collection. Those holding times expressed in hours are calculated in the AlphaLIMS system. Those holding times expressed as days expire at midnight on the day of expiration. All samples in this SDG met the specified holding time.

Preparation/Analytical Method Verification

All procedures were performed as stated in the SOP.

Sample Dilutions

The samples in this SDG did not require dilutions.

Sample Re-extraction/Re-analysis

Re-extractions or re-analyses were not required in this SDG.

Miscellaneous Information

Nonconformance (NCR) Documentation

A NCR was not required for this SDG.

Manual Integrations

Certain standards and QC samples required manual integrations to correctly position the baseline as set in the calibration standard injections. Where manual integrations were performed, copies of all manual integration peak profiles are included in the raw data section of this fraction. Manual integrations were required for data files in this SDG.

System Configuration

This analysis was performed on the following instrument configuration:

Instrument ID	Instrument	System Configuration	Column ID	Column Description
HRP750_2	Primary Dioxin Analysis	Dioxin Analysis	DB-5MS	60m x 0.25mm, 0.25um

Electronic Packaging Comment

This data package was generated using an electronic data processing program referred to as virtual packaging. In an effort to increase quality and efficiency, the laboratory has developed systems to generate all data packages electronically. The following change from traditional packages should be noted: Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. An electronic signature page inserted after the case narrative will include the data validator's signature and title. The signature page also includes the data qualifiers used in the fractional package. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

Sample Data Summary

Cape Fear Analytical, LLC

3306 Kitty Hawk Road Suite 120, Wilmington, NC 28405 - (910) 795-0421 - www.capefearanalytical.com

Certificate of Analysis Report for

CALS001 Eurofins Calscience

Client SDG: 570-14206 CFA Work Order: 15900

The Qualifiers in this report are defined as follows:

- * A quality control analyte recovery is outside of specified acceptance criteria
- ** Analyte is a surrogate compound
- B The target analyte was detected in the associated blank.
- J Value is estimated
- K Estimated Maximum Possible Concentration
- U Analyte was analyzed for, but not detected above the specified detection limit.

Review/Validation

Cape Fear Analytical requires all analytical data to be verified by a qualified data reviewer.

The following data validator verified the information presented in this case narrative:

Signature: 

Name: Heather Patterson

Date: 24 DEC 2019

Title: Group Leader

Sample Summary**

Page 1 of 2

SDG Number: 570-14206
Lab Sample ID: 15900001
Client Sample: 1613B Water
Client ID: A2BMP00112S007
Batch ID: 42571
Run Date: 12/14/2019 19:28
Data File: A14DEC19A-11
Prep Batch: 42567
Prep Date: 10-DEC-19

Client: CALS001
Date Collected: 11/27/2019 07:50
Date Received: 12/04/2019 11:00
Method: EPA Method 1613B
Analyst: MJC
Prep Method: SW846 3520C
Prep Aliquot: 1024.1 mL

Project: CALS00214
Matrix: WATER
Prep Basis: As Received
Instrument: HRP750
Dilution: 1

		Qual	Result	Nominal	Units	Recovery%
						Acceptable Limits
13C-1,2,3,4,6,7,8-HpCDF			1.41	1.95	ng/L	72.2 (28%-143%)
13C-1,2,3,4,7,8,9-HpCDF			1.56	1.95	ng/L	80.1 (26%-138%)
37Cl-2,3,7,8-TCDD			0.180	0.195	ng/L	92.2 (35%-197%)

- Comments:**
- B** The target analyte was detected in the associated blank.
 - J** Value is estimated
 - K** Estimated Maximum Possible Concentration
 - U** Analyte was analyzed for, but not detected above the specified detection limit.

13C-1,2,3,4,6,7,8-HpCDF			1.56	2.06	ng/L	76.0 (28%-143%)
13C-1,2,3,4,7,8,9-HpCDF			1.74	2.06	ng/L	84.5 (26%-138%)
37Cl-2,3,7,8-TCDD			0.199	0.206	ng/L	96.7 (35%-197%)

- Comments:**
- B** The target analyte was detected in the associated blank.
 - J** Value is estimated
 - K** Estimated Maximum Possible Concentration
 - U** Analyte was analyzed for, but not detected above the specified detection limit.
