15926002	A2BMP0012S008
15926003	EVBMP0003S030

The samples in this SDG were analyzed on an "as received" basis.

SOP Reference

Procedure for preparation, analysis and reporting of analytical data are controlled by Cape Fear Analytical LLC (CFA) as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with CF-OA-E-002 REV# 15.

Raw data reports are processed and reviewed by the analyst using the TargetLynx software package.

Calibration Information

Initial Calibration

All initial calibration requirements have been met for this sample delivery group (SDG).

Continuing Calibration Verification (CCV) Requirements

All associated calibration verification standard(s) (CCV) met the acceptance criteria.

Quality Control (QC) Information

Certification Statement

The test results presented in this document are certified to meet all requirements of the 2009 TNI Standard.

Method Blank (MB) Statement

The MB(s) analyzed with this SDG met the acceptance criteria.

Surrogate Recoveries

All surrogate recoveries were within the established acceptance criteria for this SDG.

Laboratory Control Sample (LCS) Recovery

The LCS spike recoveries met the acceptance limits.

Laboratory Control Sample Duplicate (LCSD) Recovery

The LCSD spike recoveries met the acceptance limits.

LCS/LCSD Relative Percent Difference (RPD) Statement

The RPD(s) between the LCS and LCSD met the acceptance limits.

QC Sample Designation

A matrix spike and matrix spike duplicate analysis was not required for this SDG.

Technical Information

Holding Time Specifications

CFA assigns holding times based on the associated methodology, which assigns the date and time from sample collection. Those holding times expressed in hours are calculated in the AlphaLIMS system. Those holding times expressed as days expire at midnight on the day of expiration. All samples in this SDG met the specified holding time.

Preparation/Analytical Method Verification

All procedures were performed as stated in the SOP.

Sample Dilutions

The samples in this SDG did not require dilutions.

Sample Re-extraction/Re-analysis

Re-extractions or re-analyses were not required in this SDG.

Miscellaneous Information

Nonconformance (NCR) Documentation

A NCR was not required for this SDG.

Manual Integrations

Certain standards and QC samples required manual integrations to correctly position the baseline as set in the calibration standard injections. Where manual integrations were performed, copies of all manual integration peak profiles are included in the raw data section of this fraction. Manual integrations were required for data files in this SDG.

System Configuration

This analysis was performed on the following instrument configuration:

Instrument ID	Instrument	System Configuration	Column ID	Column Description
HRP750_2	Primary Dioxin Analysis	Dioxin Analysis	DB-5MS	60m x 0.25mm, 0.25um

Electronic Packaging Comment

This data package was generated using an electronic data processing program referred to as virtual packaging. In an effort to increase quality and efficiency, the laboratory has developed systems to generate all data packages electronically. The following change from traditional packages should be noted: Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. An electronic signature page inserted after the case narrative will include the data validator's signature and title. The signature page also includes the data qualifiers used in the fractional package. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

CASE NARRATIVE

Client: Jacobs Engineering Group, Inc.

Project: CH661 / 692670.61.SW

Report Number: 570-16773-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) resulting from a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are an unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes within the calibration range of the instrument or that reduces the interferences thereby enabling the quantification of target analytes.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 12/27/2019 at 4:40 PM; the samples arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 2.7 degrees Celsius.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2 degrees Celsius of the required temperature or method specified range. For samples with a specified temperature of 4 degrees Celsius, samples with a temperature ranging from just above freezing temperature of water to 6 degrees Celsius shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

DISSOLVED METALS (ICPMS)

Samples EVBMP0007S011 (570-16773-1), EVBMP0008S014 (570-16773-2) and EVBMP0009S012 (570-16773-3) were analyzed for dissolved Metals (ICPMS) in accordance with EPA Method 200.8. The samples were analyzed on 01/02/2020.

The following samples were not filtered within 15 minutes of sample collection as required by the method: EVBMP0007S011 (570-16773-1), EVBMP0008S014 (570-16773-2) and EVBMP0009S012 (570-16773-3). The samples were filtered prior to analysis at the laboratory, and the results have been flagged.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL RECOVERABLE METALS (ICPMS)

Samples EVBMP0007S011 (570-16773-1), EVBMP0008S014 (570-16773-2) and EVBMP0009S012 (570-16773-3) were analyzed for total recoverable Metals (ICPMS) in accordance with EPA Method 200.8. The samples were prepared and analyzed on 01/02/2020.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DISSOLVED MERCURY

Samples EVBMP0007S011 (570-16773-1), EVBMP0008S014 (570-16773-2) and EVBMP0009S012 (570-16773-3) were analyzed for dissolved Mercury in accordance with EPA Method 245.1. The samples were prepared and analyzed on 01/08/2020.

The following samples were not filtered within 15 minutes of sample collection as required by the method: EVBMP0007S011 (570-16773-1), EVBMP0008S014 (570-16773-2) and EVBMP0009S012 (570-16773-3). The samples were filtered prior to analysis at the laboratory, and the results have been flagged.

Mercury was detected in method blank MB 570-43350/1-B at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

Mercury failed the recovery criteria low for the MS of sample EVBMP0007S011MS (570-16773-1) in batch 570-43304.

Mercury failed the recovery criteria low for the MSD of sample EVBMP0007S011MSD (570-16773-1) in batch 570-43304. Sample matrix interference and/or non-homogeneity are suspected because the associated LCS and LCSD recoveries were within acceptance limits.

Refer to the QC report for details.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL MERCURY

Samples EVBMP0007S011 (570-16773-1), EVBMP0008S014 (570-16773-2) and EVBMP0009S012 (570-16773-3) were analyzed for total Mercury in accordance with EPA Method 245.1. The samples were prepared on 01/02/2020 and analyzed on 01/03/2020.

The instrument blank (ICB) and/or continuing calibration blank (CCB) contained analytes greater than the lowest method detection limits (MDL), and were not reanalyzed because detections were below the reporting limits (RL). The data has been reported.

Mercury failed the recovery criteria low for the MS of sample EVBMP0007S011MS (570-16773-1) in batch 570-42667.

Mercury failed the recovery criteria low for the MSD of sample EVBMP0007S011MSD (570-16773-1) in batch 570-42667. Mercury exceeded the RPD limit. Sample matrix interference and/or non-homogeneity are suspected because the associated LCS and LCSD recoveries were within acceptance limits.

Refer to the QC report for details.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL SUSPENDED SOLIDS

Samples EVBMP0007S011 (570-16773-1), EVBMP0008S014 (570-16773-2) and EVBMP0009S012 (570-16773-3) were analyzed for Total Suspended Solids in accordance with SM 2540D. The samples were analyzed on 12/31/2019.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PARTICLE SIZE

Samples EVBMP0007S011 (570-16773-1), EVBMP0008S014 (570-16773-2) and EVBMP0009S012 (570-16773-3) were analyzed for Particle Size in accordance with ASTM D 4464. The samples were analyzed on 01/06/2020.

Particle size could not be detected for the following samples due to sample matrix: EVBMP0007S011 (570-16773-1), EVBMP0008S014 (570-16773-2) and EVBMP0009S012 (570-16773-3).

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TURBIDITY

Samples EVBMP0008S014 (570-16773-2) and EVBMP0009S012 (570-16773-3) were analyzed for Turbidity in accordance with SM 2130B. The samples were analyzed on 12/27/2019.

SPEXertificate®

Certificate of Reference Material

Catalog Number: CL-CAL-2 **Lot No.** CL2-69WGY
Description: Instrument Calibration Standard 2
Matrix: 5% HNO₃ / Tr. Tart. Acid / Tr. HF

This CLARITAS PPT® Certified Reference Material, CRM, is intended primarily for use as a calibration standard or quality control standard for inorganic spectroscopic instrumentation such as ICP-OES, DCP, AA, ICP-MS, and XRF. It can be employed in USEPA, ASTM and other methods relevant to the certified properties listed below.

The CRM is prepared from high purity single element concentrates of individual elements using Class A laboratory ware to give precise concentrations. See side 2 for details of certification.

Balances are calibrated regularly with weight sets traceable to NIST#s 32856, 32867 and others. This CRM is guaranteed stable and accurate to ±0.5% of the certified value. This includes uncertainty components due to preparation, measurement, homogeneity, and short-term and long-term stability. No measured concentration of any individual component exceeds ±2% of the labeled value. This guarantee is valid for a period of one year from the date of certification only when the material is kept tightly capped and stored under ambient laboratory conditions.

Date of Certification: AUG -- 2019

COMMENTS: Duplicate did not pass. Duplicate did not fall within 70% RPD range of original (18.61%). Closing sand run were compared for verification and were within 20% RPD range of each other (160%).

Instrument QC: Analyze one DPV control sample daily prior to sample analysis, after every batch of 10 samples or portion thereof within a 24-hour shift, and at the end of sequence. Record the standard sand ID number. Sample Batch QC: Prepare one Sample Duplicate for every batch of 20 field samples per matrix or portion thereof, and analyze immediately following a DPV control sample. Record the batch number.

Sample Analysis

Samples were received at 1.2°C (16017001, 16017002, 16017003). The following samples were analyzed using the analytical protocol as established in EPA Method 1613B:

Sample ID	Client ID
12025720	Method Blank (MB)
12025721	Laboratory Control Sample (LCS)
12025722	Laboratory Control Sample Duplicate (LCSD)
16017001	EVBMP0007S011
16017002	EVBMP0008S014
16017003	EVBMP0009S012

The samples in this SDG were analyzed on an "as received" basis.

SOP Reference

Procedure for preparation, analysis and reporting of analytical data are controlled by Cape Fear Analytical LLC (CFA) as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with CF-OA-E-002 REV# 15.

Raw data reports are processed and reviewed by the analyst using the TargetLynx software package.

Calibration Information

Initial Calibration

All initial calibration requirements have been met for this sample delivery group (SDG).

Continuing Calibration Verification (CCV) Requirements

All associated calibration verification standard(s) (CCV) met the acceptance criteria.

Quality Control (QC) Information

Certification Statement

The test results presented in this document are certified to meet all requirements of the 2009 TNI Standard.

Method Blank (MB) Statement

The MB(s) analyzed with this SDG met the acceptance criteria.

Surrogate Recoveries

All surrogate recoveries were within the established acceptance criteria for this SDG.

Laboratory Control Sample (LCS) Recovery

The LCS spike recoveries met the acceptance limits.

Laboratory Control Sample Duplicate (LCSD) Recovery

The LCSD spike recoveries met the acceptance limits.

LCS/LCSD Relative Percent Difference (RPD) Statement

The RPD(s) between the LCS and LCSD met the acceptance limits.

QC Sample Designation

A matrix spike and matrix spike duplicate analysis was not required for this SDG.

Technical Information

Holding Time Specifications

CFA assigns holding times based on the associated methodology, which assigns the date and time from sample collection. Those holding times expressed in hours are calculated in the AlphaLIMS system. Those holding times expressed as days expire at midnight on the day of expiration. All samples in this SDG met the specified holding time.

Preparation/Analytical Method Verification

All procedures were performed as stated in the SOP.

Sample Dilutions

The samples in this SDG did not require dilutions.

Sample Re-extraction/Re-analysis

Re-extractions or re-analyses were not required in this SDG.

Miscellaneous Information

Nonconformance (NCR) Documentation

A NCR was not required for this SDG.

Manual Integrations

Certain standards and QC samples required manual integrations to correctly position the baseline as set in the calibration standard injections. Where manual integrations were performed, copies of all manual integration peak profiles are included in the raw data section of this fraction. Manual integrations were required for data files in this SDG.

System Configuration

This analysis was performed on the following instrument configuration:

Instrument ID	Instrument	System Configuration	Column ID	Column Description
HRP750_2	Primary Dioxin Analysis	Dioxin Analysis	DB-5MS	60m x 0.25mm, 0.25um

Electronic Packaging Comment

This data package was generated using an electronic data processing program referred to as virtual packaging. In an effort to increase quality and efficiency, the laboratory has developed systems to generate all data packages electronically. The following change from traditional packages should be noted: Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. An electronic signature page inserted after the case narrative will include the data validator's signature and title. The signature page also includes the data qualifiers used in the fractional package. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.
